Total # - M > F; *p*<.001

Courtesy of Mary Heitzeg (University of Michigan)

Peer Substance Use

Vast majority have <u>no peers</u> doing any drugs (95%)

- Males>Females more likely to have at least a ${\color{black}\bullet}$ "few" peers that:
 - Use cigarettes (p=.01) or e-cigarettes (p=.01)
 - Drink alcohol (p=.02) or have been drunk (p<.001)
 - Sell or give drugs to others (total n=24; p<.01)
 - Endorse any peer substance use (p<.001)

- Vast majority <u>do not</u> want to try alcohol (91%), tobacco (93%) or marijuana (98%)
- **Male > Female** to be a little to very likely to try:
 - Alcohol (11.6% vs. 8.1%; p=.001) •
 - Nicotine (8.3% vs. 4.9%; p<.001) ullet

Substance Use: Sipping Alcohol

- **# Total Sips –** range 1-500 (M=4.7, SD=20)
- **# Non-religious** range 0-158 (M=2.2, SD=6.9)
 - 60% 1-2 sips
 - No Sex Difference
- Average age of first sip 7.5 (range 1-10)
 - No sex difference
- 1.1% finished the drink after the first sip
- More males report either being offered sip or intentionally taking sip in secret
- More females report accidentally taking sip
 - Sex difference: Chi-sq=12.0, p=.002

ABCD-Social Development

- **Participating Sites -** University of Pittsburgh, University of Florida, University of Michigan, Yale University, ulletUniversity of Maryland, Baltimore
- **Funding** National Institute of Justice, CDC Division of Violence Prevention •
- Brain indicators as explanatory factors of the onset and persistence of substance use, delinquency, • and victimization
 - Which contextual, personality, cognitive, and environmental <u>risk</u> factors mediate or moderate these brain indicators?
- Brain indicators and their associations with early forms of desistance/cessation in substance use, ulletdelinquency, and victimization.
 - Which contextual, personality, cognitive, and environmental <u>protective</u> factors mediate or moderate these brain indicators?
 - Are persons with psychopathic traits less likely to desist/cease in terms of the substance use-delinquencyvictimization?

Violence Prevention

Disaster and Youth, Neural and Affective **Maturation in Context (DYNAMIC) Study**

- **Participating Sites** Florida International University, University of Florida, Medical University of South Carolina, University of California, San Diego
- **Funding** NSF
- **Specific Aims**
 - Explore the impact of disaster exposure on structural brain development and cognitive and affective outcomes.
 - Evaluate the extent to which pre-Irma structural factors predict and moderate effects of Irma exposure on cognitive and affective outcomes.
- Added Measures 10-minute youth and caregiver online surveys of Irma-related experiences (e.g., exposure, media use, evacuation experiences, property damage, power/water outages, school closures, etc), and Irma-related post-traumatic stress symptoms
