Orientation for the National Cancer Advisory Board

NCAB
FOREWORD

Congratulations on your recent appointment to the National Cancer Advisory Board (NCAB). Notably, the NCAB and the President’s Cancer Panel are the only advisory bodies at either the National Institutes of Health or the Department of Health and Human Services whose members are appointed by the President. As you join this distinguished and historic panel, we could not be more honored to have you working with the National Cancer Institute (NCI).

The primary task of the NCAB is to advise the Secretary of Health and Human Services, the Director of the NCI, and ultimately the President of the United States on a range of issues affecting the Nation’s cancer program and, specifically, NCI operations. As a result of the National Cancer Act of 1971, the NCAB is required to conduct second-level peer review of grant applications and cooperative agreements referred to the NCI for funding. This briefing document has been prepared to provide new members of the NCAB with an overview of the mission, history, and activities of the National Institutes of Health (NIH) and the NCI.

The first section presents the NCI in the context of the total NIH organization. It includes budgetary information, cites current legislative statutes, and describes organizational structure, program disciplines, and mechanisms of funding used by the NCI. It also delineates the roles of those committees that advise the NCI in the conduct of its activities.

The second section describes the process used in the review of grant and cooperative agreement applications and contract proposals. It outlines the initial review procedures followed by the Center for Scientific Review (CSR) and the review groups of the NCI. Attention also is given to the initiation of special actions by NCI staff and the NCAB’s role in the overall process.

We are pleased to provide you with this NCAB Orientation Book and hope you will refer to it often in fulfilling your responsibilities as a member of the NCAB.

Paulette S. Gray, Ph.D.
Director
Division of Extramural Activities
and
Executive Secretary
National Cancer Advisory Board
National Cancer Institute

- Communication With Applicants .............................................. 60
- Freedom of Information and Privacy Acts .................................. 60
- Research Involving Human Subjects .......................................... 60
The mission of the Department of Health and Human Services (HHS) is to enhance the health and well being of Americans by providing for effective health and human services and by fostering strong, sustained advances in the sciences underlying medicine, public health, and social services. The HHS consists of the Office of the Secretary, which provides leadership; the Program Support Center, which provides centralized administrative support; and 12 operating divisions, which manage more than 300 health-related programs. These operating divisions are:

- Administration for Children and Families (ACF)
- Administration on Aging (AoA)
- Agency for Healthcare Research and Quality (AHRQ)
- Agency for Toxic Substances and Disease Registry (ATSDR)
- Centers for Disease Control and Prevention (CDC)
- Centers for Medicare and Medicaid Services (CMS) [formerly the Health Care Financing Administration (HCFA)]
- Food and Drug Administration (FDA)
- Health Resources and Services Administration (HRSA)
- Indian Health Service (IHS)
- National Institutes of Health (NIH)
- Program Support Center (PSC)
- Substance Abuse and Mental Health Services Administration (SAMHSA)

The ACF is responsible for temporary assistance to needy families; children’s welfare, care and support; disabilities programs; and other services. The AoA serves the elderly. The CMS manages health insurance programs, while the PSC provides products and services to the HHS and other Federal agencies. The NIH, AHRQ, ATSDR, CDC, FDA, HRSA, IHS, and SAMHSA are all devoted to public health and compose the Public Health Service (PHS) (see Exhibit I).

THE NATIONAL INSTITUTES OF HEALTH

Mission, Organization, and History

NIH’s mission is to uncover new knowledge that will lead to better health for everyone. The NIH works toward that mission by conducting research in its own laboratories; supporting the research of non-Federal scientists in universities, medical schools, hospitals, and research institutions throughout the country and abroad; helping to train research investigators; and fostering communication of medical information. NIH’s budget has grown from $300 in 1887, when the NIH was a one-room Laboratory of Hygiene, to $30.1 billion in 2014 (see Exhibit II). The NIH is composed of the Office of the Director, 20 Institutes, 6 Centers (four of which have funding authority), and the National Library of Medicine; it has 75 buildings located on more than 300 acres in Bethesda, Maryland. An organizational chart for the NIH is presented in Exhibit III. Exhibit IV is a guide to the Bethesda campus.

Overview of NIH History

NIH is a component of the Public Health Service (PHS) of HHS. The PHS traces its origin to “An Act for the Relief of Sick and Disabled Seamen” of 1798 (Stat. L. 604), which authorized the establishment of marine hospitals for the care of American merchant seamen. In 1912, the Public Health and Marine Hospital Service became the Public Health Service.

The actual forerunner of the National Institutes of Health was established in 1887 as the Laboratory of Hygiene, located at the Marine Hospital of Staten Island, New York. In 1930, this laboratory was renamed the National Institute of Health. The first of the present Institutes, the National Cancer Institute (NCI), was established in 1937 by an act of Congress. In 1938, the National Advisory Cancer
Exhibit I. Department of Health and Human Services
Council approved the first awards for research training fellowships in cancer research. In 1948, the National Heart Institute was established, and the National Institute of Health became the National Institutes of Health (NIH). During the years 1949-2001, the NIH expanded to include 27 Institutes and Centers. The current NIH Institutes, in order of their establishment, are:

1798 President John Adams signed “an Act for the relief of sick and disabled Seamen,” which led to the establishment of the Marine Hospital Service.

1803 The first permanent Marine Hospital was authorized to be built in Boston, Massachusetts.

1836 The Library of the Office of the Surgeon General of the Army was established.

1870 President Grant signed a law establishing a “Bureau of the U.S. Marine Hospital Service” within the Treasury Department. This Bureau, headed by a Supervising Surgeon (later Surgeon General), was given central control over the hospitals.

1887 The Laboratory of Hygiene at the Marine Hospital in Staten Island, New York, was established for research on cholera and other infectious diseases.

1891 The Laboratory of Hygiene was redesignated the Hygienic Laboratory and moved from Staten Island to the Marine Hospital Service headquarters in Washington, DC.

1902 The Advisory Board for the Hygienic Laboratory was established; later became the National Advisory Health Council. Act of Congress changed name of Marine Hospital Service to the Public Health and Marine Hospital Service. Hygienic Laboratory was authorized by Congress to regulate laboratories that produced “biologica l s.” The Hygienic Laboratory was expanded to four divisions: Bacteriology and Pathology, Chemistry, Pharmacology, and Zoology.

1912 The Public Health and Marine Hospital Service was renamed Public Health Service (PHS).

1922 The Library of the Office of the Surgeon General was renamed Army Medical Library.

1930 The Hygienic Laboratory was renamed the National Institute of Health (NIH). Congress authorized construction of two buildings for the NIH and a system of fellowships.

1937 Congress authorized the establishment of the National Cancer Institute (NCI) and the awarding of research grants. Rocky Mountain Laboratory became part of the NIH. The National Advisory Cancer Council held its first meeting.

1938 The NIH was moved to land donated by Mr. and Mrs. Luke I. Wilson, located in Bethesda, Maryland. Cornerstone for Shannon Building was laid.

1939 The Public Health Service (PHS) became part of a newly created Federal Security Agency; until that time, it was part of the Treasury Department.

1946 The Division of Research Grants was established to process NIH grants and fellowships to non-Federal institutions and scientists. (Originally established as the Research Grants Office, it was renamed the Research Grants Division and, finally, the Division of Research Grants.)

1948 The National Heart Institute was authorized. Several laboratories (including Rocky Mountain Laboratory) were regrouped to form the National Microbiological Institute. The Experimental Biology and Medicine Institute and the National Institute of Dental Research were established. The National Institute of Health became the National Institutes of Health.

1949 The Mental Hygiene Program of the PHS was transferred to the NIH and expanded to become the National Institute of Mental Health.

1950 The “Omnibus Medical Research Act” authorized the establishment of the National Institute of Neurological Diseases and Blindness, as well as the National Institute of Arthritis and Metabolic Diseases. The latter absorbed the Experimental Biology and Medicine Institute.

1953 The PHS became part of the newly created Department of Health, Education, and Welfare. The Clinical Center opened.

1955 The National Microbiological Institute was renamed National Institute of Allergy and Infectious Diseases. The Laboratory of Biologics Control was renamed the Division of Biologics Standards. The Division of Research Services was created.

1956 The Armed Forces Medical Library was renamed the National Library of Medicine (NLM) and placed in the PHS.

1957 The Center for Aging Research was established.

1958 The Division of General Medical Sciences was created. The Center for Aging Research was transferred from the National Heart Institute to the Division of General Medical Sciences.

1961 The Center for Research in Child Health was established within the Division of General Medical Sciences.

1962 The NLM was moved to the NIH campus.

1963 The Division of General Medical Sciences was renamed the National Institute of General Medical Sciences (NIGMS). The National Institute of Child Health and Human Development (NICHD) was created.

1966 The Division of Environmental Health Sciences was created.

1967 The National Institute of Mental Health was separated from the NIH and became a separate bureau of the PHS.

1968  The John E. Fogarty International Center (FIC) for Advanced Study in the Health Sciences was created. The Bureau of Health Manpower and the NLM became part of the NIH. The National Eye Institute (NEI) was created. The National Institute of Neurological Diseases and Blindness was renamed the National Institute of Neurological Diseases and Stroke.

1969  The Division of Environmental Health Sciences was renamed the National Institute of Environmental Health Sciences (NIEHS). The National Heart Institute was renamed the National Heart and Lung Institute.

1972  The National Institute of Arthritis and Metabolic Diseases was renamed the National Institute of Arthritis, Metabolism, and Digestive Diseases.

1974  The National Institute on Aging (NIA) was created.

1975  The National Institute of Neurological Diseases and Stroke was renamed the National Institute of Neurological and Communicative Disorders and Stroke (NINDS).

1976  The National Heart and Lung Institute was renamed the National Heart, Lung, and Blood Institute (NHLBI).

1981  The National Institute of Arthritis, Metabolism, and Digestive Diseases was renamed the National Institute of Arthritis, Diabetes, and Digestive and Kidney Diseases (NIADDK).

1986  The National Institute of Arthritis, Diabetes, and Digestive and Kidney Diseases was renamed the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK). The National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS) was created. The Center for Nursing Research was transferred from the Health Resources and Services Administration (HRSA) and renamed the National Center for Nursing Research.

1989  The National Institute on Deafness and Other Communication Disorders (NIDCD) was established. The National Institute of Neurological and Communicative Disorders and Stroke was renamed the National Institute of Neurological Disorders and Stroke (NINDS). The National Center for Human Genome Research was established. The National Center for Biotechnology Information was established within the NLM.

1990  The National Center for Research Resources (NCRR) was created by consolidating the Division of Research Services and the Division of Research Resources.

1992  The National Institute on Alcohol Abuse and Alcoholism (NIAAA), National Institute on Drug Abuse (NIDA), and National Institute of Mental Health (NIMH) were transferred to the NIH from the Alcohol, Drug Abuse, and Mental Health Administration.

1993  The National Center for Nursing Research was renamed the National Institute of Nursing Research (NINR).

1995  The NIH was established as an HHS Operating Division, thereby elevating it to report directly to the Secretary of HHS.

1997  The National Center for Human Genome Research was renamed the National Human Genome Research Institute (NHGRI).

1998  The Division of Research Grants was renamed the Center for Scientific Review. The National Center for Complementary and Alternative Medicine (NCCAM) was established. The National Institute of Dental Research was renamed the National Institute of Dental and Craniofacial Research (NIDCR).

2001  The National Center on Minority Health and Health Disparities was established. The National Institute of Biomedical Imaging and Bioengineering (NIBIB) was established.
The National Cancer Institute (NCI) is a component of the National Institutes of Health (NIH), one of 11 operating divisions that compose the Public Health Service (PHS) in the Department of Health and Human Services (HHS). The NCI, established under the National Cancer Act of 1937, is the Federal Government’s principal agency for cancer research and training. The National Cancer Act of 1971 broadened the scope and responsibilities of the NCI and created the National Cancer Program. Over the years, legislative amendments have maintained the NCI authorities and responsibilities and added new information dissemination mandates as well as a requirement to assess the incorporation of state-of-the-art cancer treatments into clinical practice.

The National Cancer Institute is committed to dramatically lessening the impact of cancer. The NCI is the primary means of support for America’s cancer research enterprise, whether in its own laboratories or in our Nation’s research universities. The NCI is dedicated to the understanding, diagnosis, treatment, and prevention of cancer for all people. The NCI works toward this goal by providing vision to the Nation and leadership for both domestic and international NCI-funded researchers. The NCI also works to ensure that research results are applied in clinical practice and public health related programs to reduce the burden of cancer for all populations.

Within this framework, NCI researchers work to more fully integrate discovery activities through interdisciplinary collaborations; accelerate development of interventions and new technology through translational research; and ensure the delivery of these interventions for application in the clinic and public health programs as state-of-the-art care for all those in need.

NCI and the National Cancer Program

As the leader of the National Cancer Program (NCP), the NCI provides vision and leadership to the global cancer community. The NCI conducts and supports research, training, health information dissemination, and other programs with respect to the cause, diagnosis, prevention, and treatment of cancer, rehabilitation, and the continuing care of cancer patients. Critical to the success of its programs are collaborations and partnerships that further NCI’s progress in serving cancer patients and those who care for them. The NCI supports a broad range of research to expand scientific discovery at the molecular and cellular level, within a cell’s microenvironment, and in relation to human and environmental factors that influence cancer development and progression. Each year, almost 5,000 principal investigators lead research projects that result in better ways to combat cancer. Intramural research serves as a hub for new development through cutting-edge basic, clinical, and epidemiological research. Extramural program experts provide guidance and oversight for research conducted at universities, teaching hospitals, and other organizations. Proposals are selected for funding by peer review, a rigorous process by which scientific experts evaluate new proposals and recommend the most scientifically meritorious for funding. In addition to direct research funding, the NCI offers the Nation’s cancer scientists a variety of useful research tools and services: tissue samples, statistics on cancer incidence and mortality, bioinformatic tools for analyzing data, databases of genetic information, and resources through NCI-supported Cancer Centers, Centers of Research Excellence, and the Mouse Models of Human Cancer Consortium.

The NCI also uses collaborative platforms and an interdisciplinary environment to promote translational research and intervention development. Discovery of a new tool that first helps to understand the underlying mechanism of cancer may eventually be used to help diagnose it, and then may be further developed to help treat it. For example, recent advances in bioinformatics and the related explosion of technology for genomics and proteomics research are dramatically accelerating the rate for processing large amounts of information for cancer screening and diagnosis. The largest collaborative research activity is the Clinical Trials Program for testing interventions for preventing cancer, diagnostic tools, and cancer treatments as well as providing access as early as possible to all who can benefit. The NCI supports more than 1,300 clinical trials a year, assisting more than 200,000 patients.

The NCI research impacts the delivery of improved cancer interventions to cancer patients and those who care for them. Timely communication of NCI scientific findings helps people make better health choices and
advises physicians about treatment options that are more targeted and less invasive, resulting in fewer adverse side effects. NCI researchers also are seeking the causes of disparities among underserved groups and gaps in quality cancer care, helping to translate research results into better health for groups at high risk for cancer, including cancer survivors and the aging population. In addition, the NCI is fostering partnerships with other agencies and organizations to accelerate the pace for moving targeted drugs through the pipeline of discovery, development, and delivery.

Information about NCI’s research and activities is available through its public website, http://www.cancer.gov/.

NCI Legislative Authority

The NCI, established under the National Cancer Act of 1937, is the Federal Government’s principal agency for cancer research and training. The National Cancer Act of 1971 broadened the scope and responsibilities of the NCI and created the National Cancer Program. Under the National Cancer Act of 1971, the Director of the NCI is authorized to submit, directly to the President, a professional judgment budget reflecting the full funding needs of the National Cancer Program. This budget is referred to as the Bypass Budget.

Bypass Budget

The mandate to produce a “Bypass Budget” is a special authority given to the NCI Director. The Bypass Budget builds on research successes and ensures that research discoveries are applied to improve human health, and allows the NCI Director to express to the President the plans and priorities of the NCI and the National Cancer Program, along with an indication of the associated costs.

Each year, the NCI produces this document to reflect the professional judgment of the Nation’s top cancer experts about the realities of cancer research and control, and how much money could be spent wisely in the conduct of the entire program.

The authority to produce the Bypass Budget has many benefits. The extensive strategic planning process that is used to develop the Bypass Budget builds on research successes, supporting the cancer research workforce with the technologies and resources it needs. In addition to being submitted to the President, this comprehensive research plan also is provided to Congress, and is used by the greater cancer research community, professional organizations, advisory groups, advocacy organizations, and public and private policymakers. As a result, the Bypass Budget and its development serve as a planning process for the entire National Cancer Program, outlining clearly the areas of highest priority.

In addition to informing the President, the Bypass Budget document also serves as the Institute’s strategic plan and has become a powerful communication and priority setting tool used by constituents across the National Cancer Program. Updated each year, the plan provides a guide for building on research successes, supporting the cancer research workforce with the technologies and resources it needs, and ensuring that research discoveries are applied to improve human health. This strategic plan is based on the authority and the responsibilities entrusted to the Presidentially appointed NCI Director to coordinate the research activities of the NCI with the other parts/members of the National Cancer Program.

In so doing, the Director is aided by the National Cancer Advisory Board (NCAB), a group composed of scientists, medical personnel, and consumers from all sectors, public and private, of the cancer enterprise who have the needed expertise and experience to help formulate a national agenda in cancer research. The NCAB meets with the President’s Cancer Panel (PCP) members to facilitate transfer of PCP observations on the barriers to progress in the NCP and the development of possible solutions. Their deliberations are directly coordinated with other government agencies through the participation of ex officio federal members representing key agencies involved in executing the National Cancer Program. For example, discussions at the NCAB meetings with ex officio members representing Department of Defense and Veterans Affairs health care systems directly led to the availability of NCI clinical trials through their health care systems. Close coordination across agencies is critical in the formulation of a strategic plan that takes advantage of the capabilities of each agency and the constituencies it serves.

The ability of the NCI and its partners to address the initiatives in the Bypass Budget is a measure of the success of the NCP. In this way, the Bypass Budget enables efficient strategic coordination of the NCP. As part of the evaluation process, the Presidentially appointed PCP is charged to review the implementation of such plans and identify directly for the President and the Nation the extent of their success.
NCI Organizational Structure

The NCI's current organizational structure can be seen in Exhibit V. NCI's Office of the Director serves as the focal point for the NCP, with advice from the President's Cancer Panel, the NCAB, the Board of Scientific Counselors (Basic Sciences and Clinical Sciences and Epidemiology) (BSC), and the Board of Scientific Advisors (BSA). The BSA gives final concept approval for extramural Requests for Applications (RFAs) and Requests for Proposals (RFPs), while the BSC conducts intramural laboratory and branch reviews. The Director of the Institute is assisted by Dr. James Doroshow, Deputy Director, NCI; Drs. Warren Kibbe and Dinah Singer, Acting Deputy Directors for Cancer Moonshot, NCI, and Ms. Donna Siegle, Acting Deputy Director for Management, NCI. The Scientific Program Leadership (SPL) Committee of the Institute (see Appendix A) includes the Director, Deputy Directors, Division Directors, and other senior scientific staff. The SPL meets on a regular basis to discuss various matters of NCI policy, including but not limited to review and approval of RFA and research and development contract concepts before review by the BSA; review of program announcements; development of funding plans; grant payment by exceptions, etc. NCI's cancer research activities are monitored and administrated through several extramural and intramural divisions, centers, and offices.

Office of the Director

Examples of some offices and centers within the Office of the Director include:

NCI Center for Biomedical Informatics and Information Technology (CBIIT)
The CBIIT helps speed scientific discovery and facilitates translational research by building many types of tools and resources that enable information to be shared along the continuum from the scientific bench to the clinical bedside and back. The CBIIT (1) coordinates and deploys informatics in support of NCI research initiatives; (2) provides all manner of informatics support, including platforms, services, tools, and data to NCI-supported research initiatives; (3) participates in the evaluation and prioritization of NCI's bioinformatics research portfolio; (4) conducts or facilitates research that is required to fulfill NCI's bioinformatics requirements; (5) serves as the focus for strategic planning to address NCI's expanding research initiative's informatics needs; (6) establishes bioinformatics technology standards (both within and outside of the NCI); (7) communicates, coordinates, and establishes bioinformatics exchange standards; (8) provides direct support to four NCI research programs: the Cancer Genome Anatomy Project (CGAP), the Mouse Models of Human Cancer Consortium (MMHCC), the Director's Challenge: Toward a Molecular Classification of Cancer, and Clinical Trials and develops core infrastructure to support the integration of these efforts.

Office of Communications and Education (OCE)
The OCE advances the mission of the NCI by disseminating research results to the public to improve the lives of those affected by cancer. Working closely with scientists and partners, the OCE uses effective methods to reach diverse audiences and meet their needs for the latest, evidence-based cancer information.

Office of Cancer Content Management (OCCM)
The OCCM in OCE oversees the development, publication, maintenance, and updating of the majority of cancer information products disseminated by the NCI OCE. The OCCM also manages the clearance process for all OC cancer information products.

Center to Reduce Cancer Health Disparities (CRCHD)
The CRCHD is the keystone of NCI's efforts to reduce the unequal burden of cancer in our society. As the organizational focus for these efforts, the Center directs and supports initiatives that advance the understanding of what causes health disparities. It also supports programs that develop and integrate effective interventions to reduce or eliminate these disparities. The CRCHD, through its Diversity Training Branch (DTB), leads NCI's efforts in the training of students and investigators from diverse populations who will be part of the next generation of competitive researchers in cancer and cancer health disparities research.

Office of Advocacy Relations (OAR)
The OAR engages the advocacy and NCI communities in dialogue about cancer research opportunities and priorities to advance progress and improve outcomes. The OAR (1) serves as the Institute's expert and central resource for advocacy matters; (2) facilitates dynamic relationships and collaborations to promote mutual goals; and (3) disseminates information and fosters understanding of key cancer issues and priorities.

Center for Strategic Scientific Initiatives
The Center for Strategic Scientific Initiatives (CSSI) directs the planning, development, and implementation of a number of strategic scientific and technology initiatives and partnerships that emphasize innovation, transdisciplinary teams, and convergence of scientific disciplines to en-

able progress against cancer. These programs also stress the development and application of advanced technologies, the synergy of large-scale and individual initiated research, novel partnerships, and translation of discoveries into new interventions to detect, prevent, and treat cancer more effectively.

Several offices in CSSI are committed to accelerating the progress of cancer research through its technology-driven initiatives, collaboration with other government programs, and engagement with the private sector in the areas of nanotechnology, proteomics, cancer genomics, and biospecimen resources. By placing a heavy emphasis on advanced technology development, the NCI is accelerating the creation and use of tools that are already facilitating the translation of basic knowledge into clinical advances to benefit patients with a new generation of molecularly based diagnostics and therapeutics. Programs include: Alliance for Nanotechnology in Cancer, Clinical Proteomic Technologies Initiative, Innovative Molecular Analysis Technologies, and Provocative Questions Initiative.

Office of Cancer Centers
Currently, the Office supports 69 NCI-designated Cancer Centers nationwide that are actively engaged in transdisciplinary research to reduce cancer incidence, morbidity, and mortality. The NCI-designated Cancer Centers are designated as either Comprehensive Cancer Centers (45), Cancer Centers (17), or Basic Laboratory Cancer Centers (7) and are a major source of discovery on the nature of cancer and of the development of more effective approaches to cancer prevention, diagnosis, and treatment. Comprehensive Cancer Centers also deliver medical advances to patients and their families, educate health care professionals and the public, and reach out to underserved populations. Cancer Centers are characterized by strong organizational capabilities, institutional commitment, and transdisciplinary, cancer-focused science; experienced scientific and administrative leadership; and state-of-the-art cancer research and patient care facilities.

Center for Cancer Training (CCT)
The CCT is responsible for: (1) coordinating and providing research training and career development activities for fellows and trainees in NCI’s laboratories, clinics, and other research groups; (2) developing, coordinating, and implementing opportunities in support of cancer research training, career development, and education at institutions nationwide; and (3) identifying workforce needs in cancer research and adapting NCI’s training and career development programs and funding opportunities to address these needs.

Coordinating Center for Clinical Trials (CCCT)
The CCCT is central to NCI’s efforts to accelerate the delivery of new tools into the clinic through its translational science and clinical trial enterprises. The CCCT facilitates collaborations that expedite translational and clinical cancer research by:

- Supporting the implementation of the Clinical Trials Working Group and Translational Research Working Group recommendations;
- Facilitating prioritization of the NCI’s most important clinical trials by Scientific Steering Committees working with NCI clinical programs; and
- Partnering with the NCI’s Center for Biomedical Informatics and Information Technology (CBIIT) to establish the Clinical Trials Reporting Program (CTRP), a comprehensive database with up-to-date information on all NCI-funded clinical trials.

Center for Cancer Genomics (CCG)
The CCG is focused on understanding the molecular mechanisms of cancer, with the ultimate goal of improving the prevention, early detection, diagnosis, and treatment of cancer. To meet this goal, the CCG:

- Provides information, technology, methods, informatics tools, and reagents to serve the needs of the cancer research community.
- Manages the following research programs: the Cancer Genome Anatomy Project (CGAP), the NIH Mammalian Gene Collection (MGC), the Initiative for Chemical Genetics (ICG), the Cancer Genome Atlas (TCGA), Cancer Genetic Markers of Susceptibility (CGEMS), and Therapeutically Applicable Research to Generate Effective Treatments (TARGET).

Office of Biorepositories and Biospecimen Research (OBBR)
The OBBR in CSSI is responsible for coordinating and developing the Institute’s biospecimen resources and capabilities and ensuring that human biospecimens available for cancer research are of the highest quality. This is being accomplished through the development of a common biorepository infrastructure that promotes resource sharing and team science to facilitate multi-institutional, high throughput genomic and proteomic studies.
**Center for Global Cancer Research (CGCR)**
The CGCR coordinates NCI’s worldwide activities in a number of areas, including: liaison with foreign and international agencies; and other U.S. government agencies involved in global health; coordination of cancer research activities under agreements between the United States and other countries; planning and implementation of international scientist exchange programs; sponsorship of international workshops; and dissemination of cancer information.

**Office of Government and Congressional Relations (OGCR)**
The OGCR advises the NCI Director, staff, and advisory boards on legislative and Congressional activities as they relate to the NCI mission. The OGCR coordinates, monitors, and analyzes Congressional activities; reviews, processes, and responds to all requests for information from the NCI that fall under the jurisdiction of the Freedom of Information (FOIA) and Privacy Act; and serves as NCI’s liaison for all U.S. Government Accountability Office (GAO) and DHHS Office of the Inspector General. The OGCR aims to ensure that the NCI community is kept abreast of the Congressional issues and interests that affect the Institute and, in turn, NIH. The OGCR also works closely with other offices at both the Institute and agency level.

**Office of HIV and AIDS Malignancy (OHAM)**
The Office of HIV and AIDS Malignancy (1) coordinates and works with the Divisions and other Offices to manage the portfolio of HIV/AIDS and AIDS malignancy research within the NCI; (2) advises the NCI Director and other NCI managers on issues related to research in HIV/AIDS and AIDS malignancies; (3) coordinates, helps prioritize, and facilitates the NCI research effort in HIV/AIDS and AIDS malignancies and works with NCI management to redirect the HIV/AIDS and AIDS malignancy research effort, as appropriate, into the highest priority areas; (4) interfaces with the NIH Office of AIDS Research (OAR) and other ICs with regard to research in HIV/AIDS and AIDS malignancies in the NCI; and (5) directly manages certain AIDS and AIDS malignancy research programs, such as the AIDS and Cancer Specimen Resource, the AIDS-Associated Malignancies Clinical Trial Consortium (AMC), the NCI Component of the Centers for AIDS Research (CFARS), and the NCI component of the Women’s Interagency HIV Study (WIHS).

**Small Business Innovation Research (SBIR) Development Center**
The SBIR Development Center serves as the NCI focal point for the management of all Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) Program activities, and implementation of pertinent legislation, rules and regulations and associated matters related to the SBIR/STTR Program consisting of grant and contractor awards and providing expertise, advice and services to applicants and NCI programs.

**NCI-Frederick Office of Scientific Operations**
The NCI-Frederick Office of Scientific Operations (1) oversees and manages scientific operations at NCI-Frederick and serves as the Project Office for the three main operation and support contracts at NCI-Frederick; (2) directs and develops advanced technologies that are made available to customers of NCI-Frederick; (3) implements programmatic decisions approved by the NCI Director and the Associate Director for NCI-Frederick to transition new efforts to NCI-Frederick by developing contractual requirements and budgets, arranging for needed space, and providing technical and project management advice to the Contracting Officer; (4) works closely with customers (including other NCI and NIH components, the Food and Drug Administration, the Department of Defense, the Department of Agriculture, and the Department of Homeland Security) and contractors to ensure that contractors understand customers’ needs and that the customers receive planned outcomes; (5) assists the NCI Associate Director for Frederick with the administrative and business operations of NCI-Frederick; (6) assists the NCI Associate Director for Frederick with planning and prioritizing of space and the maintenance of all buildings and grounds; (7) monitors contractor performance, obtains customer satisfaction feedback, and provides this information to the Management Operations and Support Branch for the Award Fee processes; (8) tracks and reports funds received and costs associated with all work performed at NCI-Frederick; (9) develops and manages educational, employee outreach, and public outreach programs, including programs for students K-12 and internship opportunities for high school and undergraduate students; (10) coordinates the expansion of student/fellowship mentoring programs at the NCI-Frederick; and (11) coordinates NCI-Frederick facility “activities” such as the Spring Research Festival; Take Your Child to Work Day; the Summer Student Seminar Series; Summer Student Poster Day; the Housing Resources List; speaker requests; and visits for students, teachers, and other interested groups.
Extramural Divisions

The extramural research and research-related activities of the NCI are conducted by five divisions under the supervision of the Office of the Director. The functions of the divisions and the major areas of research and research support activities for which each is responsible are:

Division of Cancer Biology (DCB)
The mission of the DCB is to ensure continuity and stability in basic cancer research, while encouraging and facilitating the emergence of new ideas, concepts, technologies, and possibilities. The DCB strives to achieve this goal by promoting a balance between the continued support of existing research areas and selective support of emerging research areas. The DCB provides guidance, advice, funding information, and financial support to grantees and applicants. The DCB encourages the expansion of new research areas through a range of initiatives and funding mechanisms. The scientific discoveries from this research base are critical to the goal of the NCI, because they form the intellectual and scientific foundation upon which strategies for the prevention, diagnosis, and treatment of cancer are developed. ([http://dcb.nci.nih.gov/](http://dcb.nci.nih.gov/))

Division of Cancer Control and Population Sciences (DCCPS)
The DCCPS aims to reduce the risk, incidence, and number of deaths from cancer, as well as to enhance the quality of life for cancer survivors. This division conducts and supports an integrated program of the highest quality genetic, epidemiologic, behavioral, social, applied, and surveillance cancer research. DCCPS funded research aims to: (1) understand the causes and distribution of cancer in various populations, (2) support the development and implementation of effective interventions, and (3) monitor and explain cancer trends in all segments of the population. Central to these activities is a process of synthesis and decision making, which aids in evaluating what has been learned, identifying new priorities and strategies, and effectively applying research discoveries to reduce the cancer burden at the population level. ([http://dccps.nci.nih.gov/](http://dccps.nci.nih.gov/))

Division of Cancer Treatment and Diagnosis (DCTD)
The DCTD attempts to identify and exploit the most promising areas of science and technology and to initiate, enable, and conduct research that will yield important new knowledge that is likely to lead to better diagnostic or therapeutic interventions in the various childhood and adult cancers. The division administers grants, contracts, and cooperative agreements, and offers strategically planned workshops and conferences with scientists, clinicians, and public and private partners. It also sponsors a vigorous program of in-house applied research linked to investigators and goals in the extramural community. ([http://dctd.cancer.gov/](http://dctd.cancer.gov/))

Division of Cancer Prevention (DCP)
The DCP plans and conducts programs in basic and applied research and development, technology transfer, demonstration, education, and information dissemination. DCP’s programs are designed to: expedite the use of new information relevant to the prevention, detection, and diagnosis of cancer; expedite the use of new information about pretreatment evaluation, treatment, rehabilitation, and continuing care; plan, direct, and coordinate the support of research on cancer prevention at Cancer Centers and community hospitals, and through organ systems programs; support cancer research training, clinical education, continuing education, and career development in cancer prevention; coordinate program activities with other divisions, Institutes, and Federal and state agencies; and establish liaison with professional and voluntary health agencies, Cancer Centers, labor organizations, cancer organizations, and trade associations. ([http://prevention.cancer.gov/](http://prevention.cancer.gov/))

Division of Extramural Activities (DEA)
The mission and responsibilities of the DEA in some way affect all extramural scientists receiving research or training support from the NCI. The DEA coordinates the review of special initiatives, large grants, and contracts. It is involved in all aspects of grant development and tracking, from the original conception of extramural research and training programs to followup after funds are dispersed. In brief, the DEA was established to: provide advice and guidance to potential applicants; receive and refer incoming grant applications to appropriate programs within the NCI; provide the highest quality and most effective scientific peer review and oversight of extramural research; coordinate and administer Federal advisory committee activities related to the various aspects of the NCI mission, such as the NCAB and BSA; establish and disseminate extramural policies and procedures, such as requirements for inclusion of certain populations in research, actions for ensuring research integrity, or budgetary limitations for grant applications; and track the NCI research portfolio (more than 7,500 research and training awards) using consistent, budget-linked scientific information to:
(1) provide a basis for budget projections and (2) serve as a resource for the dissemination of information about cancer. ([http://deainfo.nci.nih.gov/funding.htm](http://deainfo.nci.nih.gov/funding.htm))

**Intramural Center and Division**

**Center for Cancer Research (CCR)**

As the intramural component of the NCI, the CCR conducts basic clinical investigations at the Bethesda campus. The mission of the CCR is to reduce the burden of cancer through exploration, discovery, and translation. It provides a new forum for cancer research without scientific, institutional, or administrative barriers. The Center is achieving this by conducting outstanding, cutting-edge, basic and clinical research on cancer and translating these discoveries into treatment and prevention. The overall goal is to form a highly interactive, interdisciplinary group of researchers who have access to technology and are able to participate in clinical investigations. The CCR also maintains a foundation of investigator-initiated, independent research. CCR scientists conduct innovative basic and clinical research aimed at discovering the causes and mechanisms of cancer to improve the diagnosis, treatment, and prevention of cancer and other diseases. ([http://ccr.nci.nih.gov/](http://ccr.nci.nih.gov/))

**Division of Cancer Epidemiology and Genetics (DCEG)**

The DCEG is an intramural research program in which scientists conduct an international program of population-based studies to identify environmental and genetic determinants of cancer. In carrying out its mission, the DCEG is at the cutting edge of approaches to untangle complex gene-environment and gene-gene interactions in cancer etiology. To conduct these studies, investigators at all levels of their careers work collaboratively to bring together a variety of scientific disciplines. ([http://dceg.cancer.gov/](http://dceg.cancer.gov/))

**NCI Programs and Activities**

**Research Programs**

The Institute conducts and leads intensive work to advance knowledge of cancer’s biology and processes; to discover and develop new interventions; and to employ a bench-to-bedside approach that strives to rapidly make new treatments—our latest science—available to patients in the communities where they live. Across these complex endeavors, the NCI works to foster the collaborations of government, the private sector, and academia. In addition to the broad range of both basic and applied laboratory and clinical programs that it supports, the NCI provides various research support services, including the development and distribution of critical materials such as viruses, animals, equipment, tissues, and standardized reference bibliographies. These activities are conducted within the divisions and centers of the NCI, under the supervision of the Office of the Director.

**Cancer Causation**

Cancer causation research concentrates on the events involved in the initiation and promotion of cancer. It encompasses chemical and physical carcinogenesis, biological carcinogenesis, epidemiology, chemoprevention, and nutrition research. Studies in this area focus on external agents such as chemicals, radiation, fibers, and other particles, as well as viruses, parasitic infections, and host factors such as hormone levels, nutritional and immunologic status, and the genetic endowment of the individual. FY2014 cancer causation research expenditures totaled about $1.15 billion, accounting for 23.4 percent of the total NCI budget.

**Detection and Diagnosis**

Detection and diagnosis research includes studies designed to improve diagnostic accuracy; provide better prognostic information to guide therapeutic decisions; monitor the response to therapy more effectively; detect cancer at its earliest presentation; and identify populations and individuals at increased risk for the development of cancer.

Areas of emphasis include: improvements in the detection and diagnosis of breast, cervical, uterine, and prostate cancer; the transfer of molecular technologies from the laboratory to clinical practice; the identification of better prognostic markers; increased availability of human tumor samples with associated clinical information; and research to identify genetic alterations involved in tumor pathogenesis and behavior. FY2014 detection and diagnosis research expenditures totaled about $438 million, accounting for 8.9 percent of the total NCI budget.

**Treatment**

Treatment research is composed of preclinical and clinical research. Preclinical research focuses on the discovery of new antitumor agents and their development in preparation for testing in clinical trials. These agents include both synthetic compounds and natural products. Clinical research (see Appendix J) involves demonstrating the effectiveness of new anticancer treatments through systematic testing in clinical trials. Phase I trials
establish the maximum tolerated dose of a new agent; Phase II trials examine its efficacy against a variety of cancers; and Phase III trials compare the new treatment with the best standard therapy, in terms of improved survival and decreased toxicity. FY2014 treatment research expenditures totaled about $1.11 billion, accounting for 22.5 percent of the total NCI budget.

Cancer Biology
Cancer biology supports a broad spectrum of basic research on cancer and the body’s response to cancer. Studies include investigations of cellular and molecular characteristics of tumor cells, interactions among cells within a tumor, and the components of the host immune defense mechanisms. Cancer is the result of genetic damage that accumulates in stages. It is the goal of cancer biology to identify and explain the stepwise progression between the initiating event in the cell and final tumor development. FY2014 cancer biology expenditures totaled approximately $725 million, accounting for 14.7 percent of the total NCI budget.

Cancer Prevention and Control
The NCI conducts Cancer Prevention and Control basic and applied research through both intramural and extramural mechanisms in all phases of cancer prevention and control, as well as cancer surveillance. A key priority of this program is to develop strategies for the effective translation of knowledge gained from prevention and control research into health promotion and disease prevention activities for the benefit of the public. An integrated system of basic research, clinical trials, and applications research is in place and seeks to promote cancer prevention and control activities across the country.

The Cancer Prevention and Control Program includes four components and several subprograms, many of which relate to other program activities of the NCI, including information dissemination, epidemiology, and cancer treatment. The four components are Cancer Prevention Research, Cancer Control Science, Early Detection and Community Oncology, and Cancer Surveillance. FY2014 Cancer Prevention and Control Program expenditures totaled approximately $324 million, accounting for 6.6 percent of the total NCI budget.

Specialized Programs of Research Excellence
The Specialized Programs of Research Excellence (SPOREs) are designed to stimulate translational research from the laboratory to clinical practice. SPOREs, which are funded under the P50 grant mechanism, focus on research in prevention, detection, diagnosis, and treatment for a single cancer site. These are awarded to institutions that demonstrate the ability to perform significant translational research.

Comprehensive Minority Institution/Cancer Center Partnership
NCI’s Comprehensive Minority Institution/Cancer Center Partnership (U54) awards are cooperative agreements designed to establish comprehensive partnerships between the Minority Serving Institution (MSI) and the NCI-designated Cancer Centers. The partnership focuses on cancer research and one or more target areas in cancer research, training and career development, education, or outreach activities designed to benefit racial and/or ethnic minority populations in the region the Cancer Center serves. The partnership also creates a stable, long-term, collaborative relationship between the MSI and NCI-designated Cancer.

Resource Development
Cancer Centers
The Cancer Centers Program consists of a group of nationally recognized, geographically dispersed, individual institutions with outstanding scientific reputations. Each institution reflects particular research talents and special technological capabilities. In FY2014, there were 68 centers, which received a total of $270 million in support, accounting for 5.5 percent of the total NCI budget.

The NCI uses the Cancer Center Support Grant (CCSG) mechanism (P30) to support centers that conduct research and outreach activities on several different cancers. Cancer Centers are designated as either cancer centers or comprehensive cancer centers.

Cancer Centers have developed in a number of different organizational settings. Some are independent institutional entities entirely dedicated to cancer research (free-standing centers); some have been formed as clearly identifiable entities within academic institutions and promote interactive cancer research programs across departmental and/or college structures (matrix centers); and others involve multiple institutions (consortium centers).

The CCSG is intended to provide support to the peer-reviewed research base of the Cancer Center within the larger institution. The CCSG supports the operational framework (infrastructure) of the center and partially pays for shared laboratory resources and facilities. Research projects themselves are supported through the individual grants and contracts from the NIH and from a variety of other grant funding agencies and organizations.
Centers and raises awareness about problems and issues relevant to the disproportionate rates of cancer incidence and mortality in minority populations.

Research Manpower Development
The Cancer Training Branch (CTB) in the Center for Cancer Training manages the Institute’s extramural research training, career development, and education programs, and provides guidance to the extramural biomedical research community and administration of awards. This assures continued development of well-trained investigators in the basic, clinical, population, and behavioral sciences, who are prepared to address problems in cancer biology, causation, prevention and control, detection and diagnosis, treatment, and rehabilitation. Operationally, the CTB has three functions. The first is the management of NCI-funded grants in research training, career development, and cancer education. The second function is the administration of the Ruth L. Kirschstein National Research Service Award (NRSA) components (F32 and T32) of the CTB grant portfolio. The NRSA program is the major mechanism for providing long-term, stable support to a wide range of promising scientists and clinicians. Individual awards are made directly to postdoctoral fellows (F32), and institutional awards (T32) are made to scientists who, together with a group of faculty-preceptors, administer a comprehensive training program for pre- and postdoctoral trainees. CTB administers a research career development program that supports the training of both scientists and research physicians during the first 3 to 5 years between receipt of a Ph.D., M.D., or other professional degree and receipt of an individual, investigator-initiated award. Among the career mechanisms are three additional non-NRSA institutional mechanisms (K12, R25T, and R25E) and six individual career development awards (K-series). The third function is the oversight and coordination of the NIH Loan Repayment Program. Program expenditures in FY2014 totaled approximately $169 million, accounting for 3.4 percent of the total NCI budget.

NCI Funding Mechanisms
The NCI supports cancer research, cancer control, and cancer support activities through an extramural program of grants, cooperative agreements, and contracts, and through an intramural program of in-house research. In accordance with NIH tradition, the Institute’s extramural programs emphasize grant-supported, investigator-initiated research projects, which are conducted at both nonprofit and for-profit institutions in the United States and abroad. Research contracts are awarded to both nonprofit and for-profit institutions. Intramural funds support continuing investigations by NCI research scientists. The cooperative agreement mechanism, which is a cross between a grant and a contract, became available

in 1979 as an additional procurement mechanism. Annual appropriations from Congress provide the funds for all research supported by the NCI.

Exhibit VI illustrates the relationship between total NCI obligations and the grant, contract, and intramural/other components of the NCI budget from 2004 to 2014. Exhibit VII shows the 2010–2014 budget for various research areas. Exhibit VIII summarizes the FY2014 budget obligations by mechanisms. Exhibit IX shows the RPG awards by activity code and presents the number of grants awarded, the total dollars awarded, and the average cost of a grant for the period 2005–2014.

Grants
I. Research Project Grants

Research Project Grants are awards for investigator-initiated research applications. Several types of awards are made in this category; they vary in type of mechanism, type of applicant, total amount of support, and length of time. FY2014 research project grant expenditures totaled approximately $2.01 billion, accounting for 40.5 percent of the total NCI budget.

P01 Research Program Project Grant
Research Program Project Grants (P01s) support an integrated, multiproject research approach involving a number of independent investigators who share knowledge and common resources. A P01 has a defined, central research focus involving several disciplines or several aspects of one discipline. Each individual project should contribute or be directly related to the common theme of the total research effort, thus forming a system of research activities and projects directed toward a well-defined research program goal.

R01 Research Project Grant
Research Project Grants (R01s) support a discrete,

Research Project Grants and Dollars Awarded FY2005–2014*

*Excludes projects awarded with the Stamp Out Breast Cancer funds and Program Evaluation funds.
†Source: NCI Fact Book, FY2014.
specified research project to be performed by the named investigator(s) in an area representing his/her specific interest and competencies. This is generally referred to as a “traditional research project grant.”

**R03 Small Research Grant**
Small Research Grants (R03s) provide research support that is limited in time and amount, for studies in categorical program areas. Small research grants provide flexibility and are generally used to initiate studies for preliminary, short-term projects. These grants are nonrenewable.

**R21 Exploratory/Developmental Grant**
Exploratory/Developmental Grants (R21s) support the development of new research activities in categorical program areas. Support generally is restricted, in terms of the level of support and time.

**R33 Exploratory/Developmental Grant—Phase II**
Phase II Exploratory/Developmental Grants (R33s) provide additional support to innovative, exploratory, and developmental research activities that were initiated under the R21 mechanism.

**R35 Outstanding Investigator Award (OIA)**
The OIA provides long-term support to experienced investigators with outstanding records of cancer research productivity who propose to conduct exceptional research. The OIA is intended to allow investigators the opportunity to take greater risks, be more adventurous in their lines of inquiry, or take the time to develop new techniques. The OIA would allow an Institution to submit an application nominating an establishment Program Director/Principal Investigator (PD/PI) for a 7-year grant.

**R41 Small Business Technology Transfer (STTR) Grant—Phase I**
Phase I STTR Grants (R41s) support cooperative research and development projects between research institutions and small, domestic, for-profit organizations. R41s are limited in time and amount and are used to establish the technical merit and feasibility of ideas that have a potential for commercialization. Generally, support for Phase I STTR awards may not exceed $100,000 for direct and indirect costs and a fixed fee for a period normally not to exceed 2 years. **Note:** Phase I award levels and project periods are statutory guidelines. Therefore, applicants are encouraged to propose a budget and project period that are appropriate for completion of the research project. Deviations from the guidelines must be well justified.

**R42 Small Business Technology Transfer (STTR) Grant—Phase II**
Phase II STTR Grants (R42s) support in-depth development of cooperative research and development projects between research institutions and small, domestic, for-profit organizations. They are limited in time and amount, and applicants must have established during Phase I their project’s feasibility and potential for commercialization. Generally, support for Phase II awards may not exceed $500,000 for direct and indirect costs and a fixed fee for a period normally not to exceed 2 years. **Note:** Phase II award levels and project periods are statutory guidelines. Therefore, applicants are encouraged to propose a budget and project period that are appropriate for completion of the research project. Deviations from the guidelines must be well justified.

**R43 Small Business Innovation Research (SBIR) Grant—Phase I**
Phase I SBIR Grants (R43s) support research efforts by for-profit, domestic, small businesses. The objectives of this phase are to: (1) establish the technical merit and feasibility of proposed research or research and development (R&D) efforts, and (2) evaluate the performance of the small business awardee organization prior to providing further Federal support in Phase II (R44). Generally, support for Phase I awards may not exceed $100,000 for direct and indirect costs and a fixed fee for a period normally not to exceed 6 months. **Note:** Phase I award levels and project periods are statutory guidelines. Therefore, applicants are encouraged to propose a budget and project period that are appropriate for completion of the research project. Deviations from the guidelines must be well justified.

**R44 Small Business Innovation Research (SBIR) Grant—Phase II**
Phase II SBIR Grants (R44s) continue those R&D efforts that were started in Phase I (R43). Awards are based on the results of Phase I and the scientific and technical merit and commercial potential of the Phase II application. Only Phase I awardees are eligible for Phase II. Generally, support for Phase II may not exceed $750,000 for direct and indirect costs and a fixed fee for a period normally not to exceed 2 years. **Note:** Phase II award levels and project periods are statutory guidelines. Therefore, applicants are encouraged to propose a budget and project period that are appropriate for completion of the research project. Deviations from the guidelines must be well justified.

**R50 Research Specialist Award**
The Research Specialist Award supports the development of stable research career opportunities for exceptional scientists who want to pursue research within the context of an existing cancer research program, but not serve as independent investigators.

**R55 James A. Shannon Director’s Award**
Applicants do not submit requests for Shannon
Awards (R55). Instead, NCI program staff nominate previously reviewed R01 and R03 applications that are beyond the current NCI payline but, because of their merit, are eligible for funding. After each of the three review cycles per year, Shannon Award nominees are administratively reviewed by the NCI according to standard review criteria, then submitted to the Office of Extramural Research, NIH, for expedited review and concurrence prior to funding.

Shannon Awards (R55s) provide a limited award to investigators to further develop, test, and refine research techniques; perform secondary analysis of available data sets; test the feasibility of innovative and creative approaches; and conduct other discrete projects that can demonstrate the investigator’s research capabilities and lend additional weight to his or her already meritorious application.

R56 High Priority, Short-Term Project Award
Applicants do not submit requests for a High Priority Award (R56). Instead, NCI program staff nominate previously reviewed R01 applications that are beyond the current NCI payline but, because of their merit, are eligible for funding. After each of the three review cycles per year, High Priority nominees are administratively reviewed by the NCI according to standard review criteria. The NCI then determines whether any awards are made from NCI funds.

High Priority Awards (R56s) provide limited, interim support to enable an applicant to gather additional data for revision of a new or competing renewal application. The R56 will assist early career stage scientists trying to establish research careers as well as more experienced scientists who just missed receiving funds.

II. Cancer Centers and Specialized Programs of Research Excellence

The Cancer Centers, SPORE Program, and other specialized centers contain a great diversity of research approaches. In FY2014, expenditures totaled about $544 million, accounting for 14.6 percent of the total NCI budget.

P20 Planning Grant
Planning Grants (P20s) support planning for new programs, expansion or modification of existing resources, and feasibility studies for new approaches. Such awards have been particularly useful in the development of Cancer Centers, and SPOREs, but are no longer available for Cancer Centers.

P30 Cancer Center Support Grant
Cancer Center Support Grants (P30s) provide support primarily for the research infrastructure of an active and unified Cancer Center, for the purpose of: consolidating and focusing cancer-related activities; increasing research productivity; promoting shared use of research resources and improved quality control; stimulating and promoting interdisciplinary and collaborative research; and increasing the rate at which research discoveries are translated into medical developments.

P50 Specialized Center Grant
Specialized Center Grants (P50s) support any part of the full range of R&D, from very basic to clinical activities. They also may support ancillary activities, such as the protracted patient care that may be necessary while conducting primary research or R&D. The spectrum of activities comprises a multidisciplinary attack on cancer. These grants differ from Program Project Grants in that they usually are developed in response to an announcement of the programmatic needs of the NCI and receive continuous attention from its staff. Centers also may serve as regional or national resources for special research purposes.

The Specialized Programs of Research Excellence (SPORE) grant is one type of Specialized Center. The NCI SPORE is an organ site application, which includes basic and clinical investigation, thus having a significant translational component.

III. Other Research Grants

Other research includes the Research Career Program and all other research grants not included in Research Project Grants, Research Centers, and/or Cancer Prevention and Control, except for National Research Service Awards. The NCI Research Career Program includes all “K” awards. Other research also includes the Clinical Cooperative Groups, Cancer Education Program (R25), resource grants (R24/U24), conference grants, and exploratory cooperative agreements (U56). In FY2014, other research expenditures totaled approximately $430.0 million, accounting for 11.6 percent of the total NCI budget.

IV. Career Awards and Cancer Education

K01 Mentored Research Scientist Development Award
Mentored Research Scientist Development Awards (K01s) provide support and “protected time” for an intensive, supervised career development experience in the biomedical, behavioral, or clinical sciences leading to research independence. Some Institutes/Centers use the K01 to support individuals who propose to train in a new field; for individuals who have had a hiatus in their research career; or to increase research workforce diversity. The NCI supports the Mentored Research Scientist Development Award to Support Diversity.
K05 Senior Scientist Award
Senior Scientist Awards (K05s) support outstanding established scientists who have demonstrated a sustained high level of productivity, research accomplishments, and contributions to research in the fields of cancer prevention, control, and population sciences. These awards provide protected time to devote to research and to act as mentors for young investigators. The NCI supports the Established Investigator Award in Cancer Prevention, Control, Behavioral, and Population Sciences Research.

K07 Academic Career Award
Academic Career Awards (K07s) support more junior candidates who are interested in developing academic and research expertise in a specific area. They also support more senior individuals with acknowledged scientific expertise and leadership skills who are interested in improving the curricula and enhancing the research capability within an academic institution. The NCI supports the Cancer Prevention, Control, Behavioral and Population Sciences Career Development Award.

K08 Mentored Clinical Scientist Development Award
Mentored Clinical Scientist Development Awards (K08s) support the development of outstanding clinical research scientists. These awards provide specialized study for clinically trained professionals who are committed to a career in research and have the potential to develop into independent investigators. The NCI supports two K08 awards: the Mentored Clinical Scientist Development Award and the Mentored Clinical Scientist Development Award to Promote Diversity.

K12 Mentored Clinical Scientist Development Program Award
Mentored Clinical Scientist Development Program Awards (K12s) help newly trained, appointed clinicians gain independent research skills and experience in a fundamental science within the framework of an interdisciplinary R&D program. The NCI supports the Paul Calabresi Award for Clinical Oncology.

K18 Career Enhancement Award for Stem Cell Research
This program encourages investigators to obtain the training and career development they need to appropriately use stem cells in their research. It is intended to enable investigators to change the direction of their research careers or to take time from their regular professional responsibilities to broaden their scientific background by acquiring new research capabilities, specifically in the use of human or animal embryonic, adult, or cord blood stem cells. The award includes salary and support for career development costs.

K22 Career Transition Award
Career Transition Awards (K22s) help newly trained, basic or clinical investigators to develop their independent research skills through a two-phase program: an initial period involving an intramural appointment at the NIH, and a final period of support at an extramural institution. The award is intended to enable the investigator to establish a record of independent research to sustain or promote a successful research career. The NCI supports two K22 awards: the Scholars Program and the Transition Career Development Award. The NCI Scholars Program provides an opportunity for outstanding new investigators to begin independent research careers, intramurally, within the special environment of the NCI. It then enables awardees to continue their careers extramurally at an institution of their choice, where they are appointed to junior faculty positions or the equivalent. The NCI Transition Career Development Award is a fully portable mechanism that facilitates the professional advancement of talented clinician cancer scientists, clinicians in patient-oriented cancer research, and researchers in cancer prevention, control, and the population sciences.

K23 Mentored Patient-Oriented Research Career Development Award
Mentored Patient-Oriented Research Career Development Awards (K23s) provide support for the career development of investigators who focus their research endeavors on patient-oriented research. The mechanism provides support for a period of supervised study and research to clinically trained professionals who have the potential to develop into productive clinical investigators in patient-oriented research.

K24 Mid-Career Investigator in Patient-Oriented Research Award
Mid-Career Investigator in Patient-Oriented Research Awards (K24s) provide clinicians the opportunity to dedicate time to patient-oriented research and to mentor other clinical investigators in patient-oriented research.

K25 Mentored Quantitative Research Career Development Award
Mentored Quantitative Research Career Development Awards (K25s) support the career development of investigators with quantitative scientific and engineering backgrounds outside of biology or medicine, who have made a commitment to focus their research endeavors on behavioral and biomedical research (basic or clinical).

K30 Institutional Curriculum Award
Institutional Curriculum Awards (K30s) support the
development, conduct, and evaluation of curricula that are designed to improve the quality of training for aspiring clinical investigators.

K99/R00 Howard Temin Pathway to Independence Awards in Cancer Research
Howard Temin Pathway to Independence Awards in Cancer Research (K99/R00) support highly promising, postdoctoral research scientists. The initial phase is followed by independent support contingent on securing an independent research position. The goal of this award is to facilitate an investigator receiving an R01 award earlier in his/her research career.

V. Training (NRSA)

The National Research Service Award (NRSA) is the major mechanism providing long-term, stable support to a wide range of promising scientists and research clinicians. FY2014 NRSA expenditures totaled approximately $69.2 million, accounting for 1.9 percent of the NCI budget.

F31 Predoctoral Individual National Research Service Award
Predoctoral Individual National Research Service Awards (F31s) provide predoctoral individuals with supervised research training in specified health and health-related areas leading toward a research degree (e.g., Ph.D.).

F32 Postdoctoral Individual National Research Service Award
Postdoctoral Individual National Research Service Awards (F32s) provide postdoctoral research training to individuals to broaden their scientific background and extend their potential for research in specified, health-related areas.

F33 National Research Service Award for Senior Fellows
National Research Service Awards for Senior Fellows (F33s) enable experienced scientists to take time away from their regular professional responsibilities to: make major changes in the direction of research careers; broaden scientific background; acquire new research capabilities; enlarge command of an allied research field; or increase capabilities to engage in health-related research.

T32 Institutional National Research Service Award
Institutional National Research Service Awards (T32s) support training opportunities at the predoctoral or postdoctoral level at qualified institutions. Applicants must have the staff and facilities for the proposed program. After the award is made, the institution’s training Program Director is responsible for selecting the trainees and for administering the program. This program does not support residencies.

D43 International Training Grants in Epidemiology
The D43 International Training Grants in Epidemiology provide support to improve and expand epidemiologic research and the utilization of epidemiology in clinical trials and prevention research in foreign countries through support of training programs for foreign health professionals, technicians, and other health care workers.

DP1 NIH Director’s Pioneer Award (NDPA)
The DP1 NIH Director’s Pioneer Awards provide support to individuals who have the potential to make extraordinary contributions to medical research. The NIH Director’s Pioneer Award is not renewable.

DP2 NIH Director’s New Innovator Awards
The DP2 NIH Director’s New Innovator Awards provide support to highly innovative research projects by new investigators in all areas of biomedical and behavioral research.

DP5 NIH Director’s Early Independence Awards
The DP5 NIH Director’s Early Independence Awards provide an opportunity for exceptional junior scientists to accelerate their entry into an independent research career by forgoing the traditional postdoctoral training period.

Other Grant Mechanisms

R13 Conference Grant
Conference Grants (R13s) support national or international meetings, conferences, and workshops that are of value in promoting the goals of the National Cancer Program.

R15 Academic Research Enhancement Award (AREA)
Academic Research Enhancement Award (AREA) Grants (R15s) support small-scale research projects conducted by faculty in primarily baccalaureate degree-granting domestic institutions. Awards are for up to $75,000 in direct costs (plus applicable indirect costs) for periods not to exceed 36 months.

R24 Resource-Related Research Project
Resource-Related Research Project Grants (R24s) support research projects that will enhance the capability of resources to serve biomedical research.

R25 Cancer Education Grant
Cancer Education Grants (R25s) support the development and implementation of programs related to education, information provision, training, technical assistance, coordination, or evaluation. The NCI supports two distinct Cancer
Education programs: the Cancer Education and Career Development Program, and the Cancer Education Grant Program (CEGP). The NCI Cancer Education and Career Development Program (R25T) is an institutional grant program that supports the development and implementation of curriculum-dependent programs to train predoctoral and postdoctoral candidates in cancer research settings that are highly interdisciplinary and collaborative. The NCI CEGP is a flexible, curriculum-driven program aimed at developing and sustaining innovative educational approaches that ultimately will reduce cancer incidence, mortality, and morbidity. The program also focuses on improving the quality of life for cancer patients. The CEGP awards (R25Es) address a need that is not fulfilled adequately by any other grant mechanism available at the NIH. These awards are dedicated to areas of particular concern by the NCI.

S06 Minority Biomedical Research Support (MBRS)
Minority Biomedical Research Support Grants (S06s) provide funds to strengthen the biomedical research and research training capability of ethnic minority institutions, thus creating a more favorable milieu for increasing the involvement of minority faculty and students in biomedical research.

S21 Research and Institutional Resources Health Disparities Endowment Grants—Capacity Building
The S21 Research and Institutional Resources Health Disparities Endowment Grants provide support to strengthen the research and training infrastructure of the institution, while addressing current and emerging needs in minority health and other health disparities research.

SC1 Research Enhancement Award
The SC1 Research Enhancement Awards provide support for individual investigator-initiated research projects aimed at developing researchers at minority-serving institutions (MSIs) to a stage where they can transition successfully to other extramural support (R01 or equivalent).

SC2 Pilot Research Project
The SC2 Pilot Research Project grants provide support for individual investigator-initiated pilot research projects for faculty at MSIs to generate preliminary data for a more ambitious research project.

Cooperative Agreements

The cooperative agreement is a mechanism to provide funding assistance for a variety of activities. The Federal Grant and Cooperative Agreement Act of 1977 authorized use of the cooperative agreement and formally defined the circumstances under which this mechanism is to be employed by Federal agencies. These instruments are used for situations in which an assistance relationship will exist between the NCI and a recipient and substantial programmatic involvement is anticipated.

U01 Research Project Cooperative Agreement
Research Project Cooperative Agreements (U01s) support discrete, specified, circumscribed projects to be performed by the named investigator(s) in an area representing his/her specific interest and competencies. This mechanism is utilized when substantial programmatic involvement is anticipated between the NCI and the recipient.

UG1 Clinical Research Cooperative Agreement
(Single Project) Clinical Research Cooperative Agreements (UG1s) support single project applications conducting clinical evaluation of various methods of therapy and/or prevention (in specific disease areas). The UG1 is the single-component companion to the U10, which is used for multi-project applications only.

U10 Clinical Research Cooperative Agreement
(Clinical Cooperative Groups) Clinical Research Cooperative Agreements (U10s) support clinical evaluations of various methods of therapy and/or prevention in specific disease areas. These represent cooperative programs between sponsoring institutions and participating principal investigators, and usually are conducted under established protocols.

U13 Conference Cooperative Agreement
Conference Cooperative Agreements (U13s) support international, national, or regional meetings, conferences, and workshops for which substantial programmatic NCI staff involvement is planned to assist the recipients.

U19 Research Program Cooperative Agreement
Research Program Cooperative Agreements (U19s) support research programs that have multiple projects directed toward a specific major objective, basic theme, or program goal, requiring a broadly based, multidisciplinary, and often long-term approach. Substantial Federal programmatic staff involvement is intended to assist investigators during performance of research activities, as defined in the terms and conditions of the award. This mechanism can provide support for certain basic, shared resources, which facilitate the total research effort, including clinical components.

U24 Resource-Related Research Project Cooperative Agreement
Resource-Related Research Project Cooperative Agreements (U24s) support projects that help improve the capability of resources to serve biomedical research.
U43 Small Business Innovation Research (SBIR) Cooperative Agreement—Phase I (see R43)
Phase I SBIR Cooperative Agreements (U43s) support finite projects to establish the technical merit and feasibility of R&D ideas that ultimately may lead to the development of commercial products or services. This mechanism is utilized when an assistance relationship will exist between the NCI and a recipient and in which substantial programmatic involvement is anticipated. Cooperative agreement applications are considered only for the topics specifically listed in the current SBIR Omnibus Solicitation. Note: Phase I award levels and project periods are statutory guidelines. Applicants are encouraged to propose a budget and project period that are appropriate for completion of the research project. Deviations from the guidelines must be well justified.

U44 Small Business Innovation Research (SBIR) Cooperative Agreement—Phase II (see U43 and R44)
Phase II SBIR Cooperative Agreements (U44s) support in-depth development of R&D ideas for which feasibility has been established in Phase I (U43) and that are likely to result in commercial products or services. Note: Phase II award levels and project periods are statutory guidelines. Applicants are encouraged to propose a budget and project period that are appropriate for completion of the research project. Deviations from the guidelines must be well justified.

U54 Specialized Center—Cooperative Agreement
Specialized Center Cooperative Agreements (U54s) support any part of the full range of R&D, from basic concepts to clinical applications. The U54 may involve ancillary supportive activities, such as the provision of protracted patient care during the primary research or R&D effort. The spectrum of activities comprises a multidisciplinary attack on a specific disease entity or biomedical problem area. The U54s differ from program projects in that they usually are developed in response to an announcement of the programmatic needs of an Institute or division and subsequently receive continuous attention from its staff. Centers also may serve as regional or national resources for special research purposes, with funding staff helping to identify appropriate priority needs. At the NCI, U54s support comprehensive partnerships between Minority Serving Institutions (MSIs) and the NCI-designated Cancer Centers, for the benefit of both. These partnerships focus on cancer research career development at the MSI or cancer research plus one or more target areas in cancer research training. These partnerships also may focus on cancer research and target areas in cancer education for, or cancer outreach to, minority communities.

U56 Exploratory Grant—Cooperative Agreement
Exploratory Grant Cooperative Agreements (U56s) support planning for new programs, expansion or modification of existing resources, and development of feasibility studies to explore the development of interdisciplinary programs that offer potential solutions to problems of special significance to the mission of the NIH. These exploratory studies may lead to specialized or comprehensive centers. Substantial Federal programmatic staff involvement is intended to assist investigators during the performance of the research activities, as defined in the terms and conditions of award.

UH2 Exploratory/Developmental Cooperative Agreement—Phase I
Exploratory/Developmental Cooperative Agreement Phase I (UH2) provides support for the development of new research activities in categorical program areas. (Support generally is restricted in level of support and in time.)

UH3 Exploratory/Developmental Cooperative Agreement—Phase II
The UH3 provides a second phase for the support for innovative exploratory and development research activities initiated under the UH2 mechanism. Although only UH2 awardees are generally eligible to apply for UH3 support, specific program initiatives may establish eligibility criteria under which applications could be accepted from applicants demonstrating progress equivalent to that expected under UH2.

UM1 Research Project With Complex Structure Cooperative Agreement
Research Project With Complex Structure Cooperative Agreements provide support for large-scale research activities with complicated structures that cannot be appropriately categorized into an available single component activity code (e.g., clinical networks, research programs, or consortia). The components represent a variety of supporting functions and are not independent of each component. Substantial Federal programmatic staff involvement is intended to assist investigators during performance of the research activities, as defined in the terms and conditions of the award. The performance period may extend up to 7 years but only through the established deviation request process. ICs desiring to use this activity code for programs greater than 5 years must receive OPERA prior approval through the deviation request process.

UM2 Program Project or Center With Complex Structure Cooperative Agreement
These cooperative agreements involve program
projects or centers with complicated structures that cannot be appropriately categorized into an available multicomponent activity code (e.g., clinical networks, research programs, or consortia). At least one component must be UM1-like, supporting a variety of functions that are dependent on each other and cannot be separated into distinct components. Substantial Federal programmatic staff involvement is intended to assist investigators during performance of the research activities, as defined in the terms and conditions of the award. The performance period may extend up to 7 years but only through the established deviation request process.

Solicitation of Grant Applications

Electronic grant applications must be submitted in response to a Funding Opportunity Announcement (FOA) published on www.grants.gov or the NIH Guide for Grants and Contracts. “Investigator Initiated” or “unsolicited” applications are submitted to Parent Announcements that are mechanism (e.g., R01, R21, R44, etc.) specific. In addition, the NCI may encourage the submission of grant applications through the publication of additional FOAs using the following types of solicitations:

Program Announcements (PAs)
PAs describe continuing, new, or expanded program interests for which grant or cooperative agreement applications are invited. Applications in response to PAs are reviewed in the same manner as unsolicited grant applications (i.e., by chartered Center for Scientific Review [CSR] peer review committees or Special Emphasis Panels [SEPs] or by NCI SEPs).

Program Announcements With Special Receipt/Review (PARs)
PARs are program announcements that have special receipt dates, referral guidelines, and review considerations and are reviewed either by CSR or by a specific IC, IRG, or SEP.

Requests for Applications (RFAs)
RFAs are issued to invite grant or cooperative agreement applications in a well-defined scientific area, to stimulate activity in NCI programmatic priority areas. Usually a single application receipt date is specified, and the announcement identifies the amount of funds earmarked for the initiative and the number of awards likely to be funded. Applications are evaluated before review for responsiveness to the RFA.

All PAs and RFAs are published in the NIH Guide for Grants and Contracts (http://www.nih.gov/grants/guide/index.html) and, when appropriate, in scientific journals and periodicals.

Contracts

Research and Development Contracts
To stimulate scientific inquiry, direct it toward promising areas of current research, and solve specific research problems, the NCI awards research, development, demonstration, and support contracts to both nonprofit and commercial organizations. The idea for a contract may be generated by the NCI program staff (usually the Project Officer), or it may originate from members of the scientific community. The negotiated contract used by the NCI is awarded through a competitive process, in which bidders are judged on the basis of technical (scientific merit), business, and cost factors. The responsibility for reviewing the technical merit of proposals for R&D contracts is lodged in the Research Technology and Contract Review Branch (RTC RB), DEA, NCI. Review responsibility is separated from those responsibilities of the Project and Contracting Officers. After award, the NCI is substantially involved in monitoring the project; this may range from tight control to general surveillance and support. Contracts may be used in support of either research or resource projects. In a research contract, the NCI defines the specific area of research and may identify general approaches. Such a contract usually is used to stimulate work in an area that has been neglected by the private sector.

Loan Repayment Program (LRP)

The LRP was started in 1989 to recruit and retain highly qualified professionals as AIDS researchers. Using the contract mechanism, this program provides for repayment of up to $35,000 (principal and interest) of eligible, educational loans for qualified clinical and pediatric investigators, for each year of their research service. To be eligible, the awardee must agree to engage in clinical or pediatric research for a minimum of 2 years. Originally confined to intramural researchers, the LRP was expanded in 2002 to include extramural investigators.

L30 Clinical Research Loan Repayment Program
The Clinical Research Loan Repayment Program is for eligible investigators, in exchange for a 2-year Commitment to clinical research. To participate in the program, individuals must hold an appropriate terminal degree from an accredited institution, must conduct research for 20 hours per week (based on a 40-hour week), and must conduct research that is supported by a domestic, nonprofit institution or by a U.S. Government entity.

L40 Pediatric Research Loan Repayment Program
The Pediatric Research Loan Repayment Program
is for eligible investigators, in exchange for a 2-year commitment to pediatric research. To participate in the program, individuals must hold an appropriate terminal degree from an accredited institution, must conduct research for 20 hours per week (based on a 40-hour week), and must conduct research that is supported by a domestic, nonprofit institution or by a U.S. Government entity.

NCI Advisory Committees

President’s Cancer Panel (PCP)
The President’s Cancer Panel (see Appendix B) is an NCI Federal advisory committee that reports directly to the U.S. President on the activities of the National Cancer Program. The panel was established by the Public Health Service Act, as amended by the National Cancer Act (P.L. 92-218), and was chartered in accordance with the Federal Advisory Committee Act (P.L. 92-463). The Panel consists of three members who are appointed by the President for terms of 3 years. One of the members is appointed by the President as Chairperson of the Panel for a 1-year term. At least two members must be distinguished scientists or physicians, and the third may be a lay person. The panel, which meets at least four times a year, is responsible for monitoring the development and execution of the National Cancer Program, evaluating its efficacy, making suggestions for its improvement, and submitting periodic progress reports to the President.

National Cancer Advisory Board (NCAB)
The NCAB (see Appendix C) advises, assists, consults with, and makes recommendations to the Secretary of HHS and the Director of NCI regarding the activities carried out by and through the Institute as well as policies respecting these activities. The NCAB may make recommendations regarding support grants and cooperative agreements, technical and scientific peer review, and functions pertaining to the NCI as described under sections 405, 406, 413, and 414 of the PHS Act, as amended.

The NCAB may implement procedures for expediting en bloc concurrence of Scientific Review Group recommendations. Several members may be selected by the Chair and/or Executive Secretary to provide en bloc concurrence on behalf of the Board. Only those applications that do not require individual consideration are included in this expedited process. A report of the en bloc recommendations is presented at each Board meeting.

Board of Scientific Advisors (BSA)
The BSA (see Appendix D) advises NCI’s Director, Deputy Directors, and the Director of each NCI division, office, and center on a wide variety of matters. Topics include scientific program policy and the progress and future direction of each division’s extramural research programs. The BSA’s responsibilities include the evaluation of NCI awarded grants, cooperative agreements, and contracts, as well as concept review of those activities that it considers to be meritorious and consistent with the Institute’s programs. The advisory role of the Board is scientific and does not include deliberation on matters of public policy. As necessary, the Board and its subcommittees may call upon special consultants, assemble ad hoc working groups, and convene conferences, workshops, or other activities.

Board of Scientific Counselors (BSC)
The BSC (see Appendixes E and F) advises the Directors of NCI’s Intramural Division of Cancer Epidemiology and Genetics (DCEG) and Center for Cancer Research (CCR), and the Director of the NCI, on a wide variety of matters concerning scientific program policy and the progress and future direction of each of the intramural research programs. The BSC evaluates performance and productivity of each division, including the staff scientists, through periodic site visits to intramural laboratories. It also offers advice on the course of programs comprising DCEG and CCR.

NCI Council of Research Advocates (NCRA)
The NCRA (see Appendix G) provides advice to the Director, National Cancer Institute (NCI), with respect to promoting research outcomes that are in the best interest of cancer patients. To this end, the NCRA will conduct these activities with the intent to identify new approaches, promote innovation, recognize unforeseen risks or barriers, and identify unintended consequences that could result from NCI decisions or actions. Additionally, the NCRA will provide insight into enhancing input, optimizing outreach, and promoting strong collaborations, all with respect to non-scientist stakeholders.

Clinical Trials and Translational Research Advisory Committee (CTAC)
The Committee (see Appendix H) advises, assists, consults with, and makes recommendations to the Director, NCI, NCI Deputy Directors, and the Director of each NCI Division on the NCI-supported national clinical trials enterprise to build a strong scientific infrastructure by bringing together a broadly developed and engaged coalition of stakeholders involved in the clinical trials process. This encompasses oversight of all extramural and intramural trials. The Committee provides broad scientific and programmatic advice on the investment of taxpayer dollars in clinical trials and supportive science; makes

NCI NCAB Orientation Book 29
recommendations regarding the effectiveness of NCI’s translational research management and administration program; advises on the appropriate magnitude for dedicated translational research priorities and recommend allocation of translational research operations across organizational units, programs, disease sites, populations, developmental pathways, and molecular mechanisms; and ensures that appropriate emphasis is placed on rare cancers, medically underserved populations, and historically lower resourced pathways to clinical goals.

Frederick National Laboratory Advisory Committee (FNLAC)
The FNLAC (see Appendix I) provides advice and makes recommendations to the Director, NCI, and the Associate Director, NCI-Frederick, on the optimal use of the NCI-Frederick facility to rapidly meet the most urgent needs of the Institute. The NCI facility in Frederick, Maryland, was established in 1972 as a Government-owned contractor-operated facility. In 1975, the facility was designated as a Federally Funded Research and Development Center (FFRDC) to provide a unique national resource for the development of new technologies and the translation of basic science discoveries into novel agents for the prevention, diagnosis, and treatment of cancer and acquired immune deficiency syndrome (AIDS). The FFRDC has been renamed as the Frederick National Laboratory for Cancer Research (FNLCR).

As such, the FNLAC reviews the state of research at the FNLCR and makes recommendations to the Director, NCI, and the Associate Director, NCI-Frederick, for the best use of its capabilities and infrastructure. The committee reviews major new projects proposed to be performed, the existing portfolio of projects and evaluation of their productivity, and helps to determine which of these projects should be transitioned to more conventional mechanisms of support and which should be considered for termination.

Initial Review Group (IRG)
The IRG advises the Director of the NCI, and the Director, Division of Extramural Activities, NCI, on the scientific and technical merit of applications for grants for research, research training, research-related grants and cooperative agreements, or contract proposals relating to scientific areas relevant to carcinogenesis, cancer biology and diagnosis, Cancer Center administration, medicine, radiological and surgical oncology, cancer chemotherapy, cancer epidemiology, cancer prevention and control, cancer education, cancer information services, community outreach, cancer detection and diagnosis, cancer treatment and restorative care, dentistry, nursing, public health, nutrition, education of health professionals, medical oncology, surgery, radiotherapy, gynecologic oncology, pediatric oncology, pathology, and biostatistics. The IRG is composed of four chartered subcommittees. Subcommittee A reviews Cancer Center Support grant (CCSG) applications. Subcommittee F reviews Institutional Training and Education applications. Subcommittee I reviews Transition to Independence applications, and Subcommittee J reviews Career Development applications.
INTRODUCTION

Because of the magnitude, diversity, and complexity of its research mission, as well as its pursuit of excellence, the National Institutes of Health (NIH) draws on a national pool of scientists actively engaged in research. These scientists advise the NIH about how to select research projects based on scientific merit.

As discussed in the previous section, the National Cancer Institute (NCI) supports research through three major mechanisms: grants for investigator-initiated projects, cooperative agreements for projects in which programmatic involvement between the NCI and a recipient is anticipated, and research and development contracts for projects that are undertaken in response to NCI Requests for Proposals. All undergo peer review before funding decisions are made.

The dual peer review system of the NIH consists of two sequential levels of review, mandated by statute. Although the system already had been in effect for many years, the first or initial level of peer review of research grant applications was formally mandated in 1974 by Section 475 of the Public Health Service Act. The review of grant applications by national boards/councils was mandated by the National Cancer Act in 1937, and incorporated into the Public Health Service Act in 1944. In 1978, P.L. 95-224 authorized and directed the use of cooperative agreements, which also are subject to peer review.

The NCAB performs the second level of review for NCI grants, as mandated by the National Cancer Act of 1937 and incorporated into the Public Health Service Act in 1944. NCAB members bring to the grant review process their knowledge in each of the relevant programmatic areas. They also are familiar with NCI priorities and procedures and are aware of the missions of the diverse Institutes in biomedical research as well as the health needs of the American people.

The NCAB is composed of both scientific and lay public representatives who are selected for their expertise, interest, or activity in matters related to the mission of the specific Institute for which the board or council serves. Board recommendations are based not only on consideration of scientific merit as judged by the CSR Integrated Review Groups (IRGs) or the NCI Initial Review Group (IRG) or Special Emphasis Panel (SEP), but also on the relevance of the proposed study to an Institute’s programs and priorities. By statute, Congress established the National Advisory Cancer Council as the National Cancer Advisory Board.

The dual review system—which separates the scientific assessment of proposed projects from policy decisions about scientific areas to be supported and the level of resources to be allocated—permits a more objective evaluation than would a single level of peer review. It guarantees that the NCI program staff will assess only the programmatic aspects of an application, while the members of the scientific research community evaluate the project’s technical merit. This dual system provides the responsible NIH official with the best advice available regarding both scientific and societal values and needs.

LEGAL BASIS FOR PEER REVIEW

The Federal Advisory Committee Act of 1972 (P.L. 92-463), as well as various sections of the Public Health Service Act and its amendments, set forth the legal basis for rules and regulations that govern the creation, operation, and duration of Advisory committees in the Executive Branch of the Federal Government. The PHS Peer Review Regulations (42 CFR 52.12 and 52h) provide for implementation of peer review procedures for grant applications and contract proposals as required by the 1974 amendments to the National Cancer Act (P.L. 93-352). The PHS Grants Policy Statement sets forth PHS guidelines based upon these regulations for the nomination, appointment, and participation of peer review group members and the operation of review committees. The NIH peer review policy is presented in a series of memoranda issued by the NIH Office of the Director.

The following describes the review of grant applications in detail. Review of contract proposals is described on pp. 46–48.
ELECTRONIC SUBMISSION OF GRANT APPLICATIONS

NIH Transitions From Paper PHS398 Grant Application Submissions to Electronic Submission Using the SF424 (R&R) Application

The National Institutes of Health transitioned from paper submission of grant applications to electronic submission via the Web portal of http://www.grants.gov, while simultaneously phasing out the PHS398 grant application form and replacing it with the SF424 [Research and Research-related (R&R)] application.

PROCESSING OF GRANT APPLICATIONS

Receipt and Assignment of Grant Applications

The referral section of the Center for Scientific Review (CSR) serves as the central receipt point for all competing applications, including applications submitted in response to specifically targeted, pre-announced RFAs or program announcements in areas of Institute interest. Exhibit X provides a typical timeframe, from the date of receipt of applications through assignment of applications. Within CSR’s Division of Receipt and Referral, referral officers, who are Health Scientist Administrators, determine the relevance of the applications to NIH’s overall mission and assign each acceptable application to an appropriate CSR IRG and to an Institute. The choice of an IRG is based upon the relevance of a proposed research project to the review responsibilities of the IRG members, but assignment to an Institute is based upon that Institute’s legislatively mandated program responsibility. If the subject matter of an application is pertinent to the missions of two Institutes, a dual assignment may be made. When an application clearly is not appropriate to any of the established IRGs, it usually is assigned to a Special Emphasis Panel (SEP) consisting of experts in that particular field. Applicants are notified by mail of these assignments, usually within 6 to 8 weeks of submission.

Grant Application Identification Number

As each new application is received, it is assigned an identification number and checked for completeness. The following is an example of a grant application identification number:

<table>
<thead>
<tr>
<th>Application Type</th>
<th>Activity Code</th>
<th>Administering Organization Serial Number</th>
<th>Suffix</th>
<th>Grant Year</th>
<th>Suffix Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>R01</td>
<td>CA 100228</td>
<td>01</td>
<td>A1 or S1</td>
<td></td>
</tr>
</tbody>
</table>

The identification number shows a new (Type 1) application for a traditional research project (R01) assigned to the NCI (CA). The serial number indicates that it is the 100,228th application assigned to the NCI. The suffix (01) shows that this is the first year of support for this project. When the grant year is followed by an A1, it is the first revised or amended application; if followed by an S1, it is for the first supplement. Applicants are allowed to submit only one amended application, for which the serial number of the application remains the same. If an application is submitted for a third time, it must be substantially different and is given a new grant number.

There are nine application types that may be used to identify a specific grant application. A description of these nine application types is shown on p. 34. Copies of the application then are forwarded to the appropriate Institute and IRG.

**Initial Peer Review**

**CSR Integrated Review Groups**

There are approximately 25 chartered IRGs distributed among the five review divisions within the CSR. Each IRG is administered by a Scientific Review Officer (SRO) and has 5 to 10 Scientific Review Groups (SRGs), or “study sections,” that review applications on specific topics (e.g., cell biology, clinical oncology, pathology, biochemistry, virology), regardless of the awarding NIH Institute assignment. There are approximately 180 regular study sections in the 25 IRGs (see Exhibit XI), plus 29 fellowship and 37 small business and technology transfer Special Emphasis Panels (SEPs). A listing of IRGs and their study sections may be found at the following website: [http://public.csr.nih.gov/StudySections/IntegratedReviewGroups/Pages/default.aspx](http://public.csr.nih.gov/StudySections/IntegratedReviewGroups/Pages/default.aspx).

Generally, a study section is composed of 12 to 18 mostly non-Federal scientists who are selected on the basis of recognized competence in their respective research fields. In each of the three review cycles per year, a CSR study section may review between 50 and 100 grant applications.

Each study section is organized and managed by an SRO—an NIH staff scientist who is the designated Federal official responsible for ensuring that the grant applications are reviewed in an impartial environment. SROs are responsible for overseeing the scientific peer review of applications. Their major responsibilities include managing study section meetings, nominating study section members, selecting ad hoc reviewers and site visitors, providing orientation for members of review groups, explaining and interpreting the NIH review policies and

</table>
procedures, managing project site visits and study section meetings, and preparing Summary Statements. They also are responsible for attending advisory board or council meetings to provide requested information in support of the peer review committee recommendations; communicating with program staff on review issues; and discussing review issues and policies with applicants. SROs do not have continuing programmatic, scientific, or fiscal responsibilities for the applications after the scientific peer review is completed.

The IRGs described above are chartered committees the members of which usually serve terms of 4 to 6 years. It often is required to recruit ad hoc committees to review single or groups of related applications (e.g., Institute review for an RFA). These ad hoc committees are referred to as Special Emphasis Panels or SEPs.

**Selection of IRG Members**

The primary requirement for serving on an IRG or SEP is competence as an independent investigator in a scientific or clinical discipline or research specialty. Assessment of a candidate’s competence is based upon the quality of his or her research; publications in refereed scientific journals; and other significant scientific activities, achievements, and honors. Usually, an individual with a doctoral degree or its equivalent is sought. Service on IRGs requires mature judgment, balanced perspective and objectivity, the ability to work effectively in a group context, and commitment to completing work assignments. Personal integrity also is important to assure confidentiality of applications and discussions and to avoid actual or potential conflicts of interest. Other factors also must be considered, such as geographic distribution and adequate representation of ethnic/racial, minority and female scientists. Also, in clinical reviews where it is appropriate, patient advocates are recruited and asked to provide personal insights that are relevant to patients’ issues.

IRG members are appointed by the Director of the NIH for 4 to 6 year terms, which usually begin in July, end on June 30 of the fourth year (regardless of the date of appointment), and normally are not extended. There must be a break in service before a retired reviewer may be appointed to the same NIH committee. However, an individual may serve on another Institute or Center (I/C) IRG, or any other type of advisory committee immediately after his or her term on an advisory committee. In some cases, a person may serve on two committees at the same time if they are in separate I/Cs. IRG appointments are staggered, so that approximately one-fourth of the membership of a group is replaced each year. Two members from a single institution may be appointed to the same IRG at the same time in the same city if they are in different departments and there is no supervisory relationship. Separate branches of state university systems are considered to be separate institutions. A member may serve on two chartered PHS review committees simultaneously if they are in different I/Cs, and he or she may serve on an SEP ad hoc committee.

**The Review Session**

IRGs (CSR study sections and NCI review committees) and SEPs meet from 1 to 3 months before each meeting of the National Cancer Advisory Board (NCAB). Before the meeting, the SRO of the IRG studies all of the applications assigned to his or her committee and obtains any additional information necessary for the review from the principal investigators or applicant institutions. Six to eight weeks before the meeting date, the SRO assigns each application to three or more members of the IRG, who prepare detailed critiques and lead the discussion of the application at the review meeting. Each member reviews approximately 10 applications in detail. In addition, every member is expected to read and comment on as many applications as possible to be reviewed at the meeting. During the three annual meetings, each of which lasts 1 to 2 days, each IRG reviews approximately 85 applications.

The SRO is responsible for providing any information or materials necessary for the review, communicating with applicants, and providing the appropriate I/C advisory board/council with an accurate record of the proceedings in the form of a detailed Summary Statement (see pp. 42-44). At the review meeting, each assigned reviewer makes an initial recommendation to the review group about the merit of each application. (For applicants that have been site visited, two or more members of the site visit team, usually IRG members, will summarize their findings and recommendations, including a budget and project period, for the full parent committee.) A discussion ensues, following which each member of the committee votes on the application’s technical merit and assigns an overall impact score. Scores are summed and averaged for each application. The CSR meeting is presided over by the chairperson, who is a member of the IRG, nominated by the SRO and appointed by the Director of the NIH. The NCI Director has the authority to appoint NCI IRG members and chairpersons.
The IRG meetings also are attended by staff members of ICs to which applications have been assigned, liaison members for certain other Federal agencies, and appropriate NIH staff. The review of applications is conducted in closed sessions, which are attended only by review committee members and appropriate Institute staff. Exhibit XII shows the yearly NIH grants review schedule.

Criteria for Evaluation

Overall Impact

Reviewers will provide an overall impact score to reflect their assessment of the likelihood for the project to exert a sustained, powerful influence on the research field(s) involved, in consideration of the following five core review criteria, and additional review criteria (as applicable for the project proposed).

Core Review Criteria

Reviewers will consider each of the five review criteria that have been recently modified to assess the reproducibility of research findings through increased scientific rigor and transparency in the determination of the scientific and technical merit, and give a separate score for each. An application does not need to be strong in all categories to be judged likely to have major scientific impact. For example, a project that by its nature is not innovative may be essential to advance a field.

1. **Significance**: Does the project address an important problem or a critical barrier to progress in the field? Is there a strong scientific premise for the project? If the aims of the project are achieved, how will scientific knowledge, technical capability, and/or clinical practice be improved? How will successful completion of the aims change the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field?

2. **Investigators**: Are the PD/PIs, collaborators, and other researchers well suited to the project? Do Early Stage Investigators or New Investigators have the appropriate experience and training? If established, have they demonstrated an ongoing record of accomplishments that have advanced their field(s)? If the project is collaborative or multi-PD/PI, do the investigators have complementary and integrated expertise; are their leadership approach, governance, and organizational structure appropriate for the project?

3. **Innovation**: Does the application challenge and seek to shift current research or clinical practice paradigms by utilizing novel theoretical concepts, approaches or methodologies, instrumentation, or interventions? Are the concepts, approaches or methodologies, instrumentation, or interventions novel to one field of research or novel in a broad sense? Is a refinement, improvement, or new application of theoretical concepts, approaches or methodologies, instrumentation, or interventions proposed?

4. **Approach**: Are the overall strategy, methodology, and analyses well-reasoned and appropriate to accomplish the specific aims of the project? Have the investigators presented strategies to ensure a robust and unbiased approach, as appropriate for the work proposed? Are potential problems, alternative strategies, and benchmarks for success presented? If the project is in the early stages of development, will the strategy establish feasibility and will particularly risky aspects be managed? Have the investigators presented adequate plans to address relevant biological variables, such as sex, for studies in vertebrate animals or human subjects? If the project involves clinical research, are the plans for (1) protection of human subjects from research risks, and (2) inclusion of minorities and members of both sexes/genders, as well as the inclusion of children, justified in terms of the scientific goals and research strategy proposed?

5. **Environment**: Will the scientific environment in which the work will be done contribute to the probability of success? Are the institutional support, equipment, and other physical resources available to the investigators adequate for the project proposed? Will the project benefit from unique features of the scientific environment, subject populations, or collaborative arrangements?

Additional Review Criteria

In addition to the above criteria, in accordance with NIH policy, reviewers will consider the following additional items in the determination of scientific and technical merit, but will not give separate scores for these items:

- **Protections for Human Subjects**: For research that involves human subjects but does not involve one of the six categories of research that are exempt under 45 CFR Part 46, the committee will evaluate the justification for involvement of human subjects and the proposed

</table>

* Advisory Council Review: month listed is as recorded in NIH’s grants database and reported in eRA Commons. The actual date of the Council may be in the month before or after. For example, some ICs may actually hold the January Council meeting in February or the October Council in September.

† Awarding components may not always be able to honor the requested start date of an application; therefore, applicants should make no commitments or obligations until confirmation of the start date by the awarding component.
protections from research risk relating to their participation according to the following five review criteria: (1) risk to subjects, (2) adequacy of protection against risks, (3) potential benefits to the subjects and others, (4) importance of the knowledge to be gained, and (5) data and safety monitoring for clinical trials. For research that involves human subjects and meets the criteria for one or more of the six categories of research that are exempt under 45 CFR Part 46, the committee will evaluate: (1) the justification for the exemption, (2) human subjects involvement and characteristics, and (3) sources of materials.

- **Inclusion of Women, Minorities, and Children:** When the proposed project involves clinical research, the committee will evaluate the proposed plans for inclusion of minorities and members of both genders, as well as the inclusion of children.

- **Vertebrate Animals:** The committee will evaluate the involvement of live vertebrate animals as part of the scientific assessment according to the following five points: (1) proposed use of the animals, and species, strains, ages, sex, and numbers to be used; (2) justifications for the use of animals and for the appropriateness of the species and numbers proposed; (3) adequacy of veterinary care; (4) procedures for limiting discomfort, distress, pain, and injury to that which is unavoidable in the conduct of scientifically sound research, including the use of analgesic, anesthetic, and tranquilizing drugs and/or comfortable restraining devices; and (5) methods of euthanasia and reason for selection if not consistent with the AVMA Guidelines on Euthanasia.

- **Resubmission Applications:** When reviewing a Resubmission application (formerly called an amended application), the committee will evaluate the application as now presented, taking into consideration the responses to comments from the previous scientific review group and changes made to the project. One resubmission is allowed per application.

- **Renewal Applications:** When reviewing a Renewal application (formerly called a competing continuation application), the committee will consider the progress made in the last funding period.

- **Revision Applications:** When reviewing a Revision application (formerly called a competing supplement application), the committee will consider the appropriateness of the proposed expansion of the scope of the project. If the Revision application relates to a specific line of investigation presented in the original application that was not recommended for approval by the committee, then the committee will consider whether the responses to comments from the previous scientific review group are adequate and whether substantial changes are clearly evident.

- **Biohazards:** Reviewers will assess whether the materials or procedures proposed are potentially hazardous to research personnel and/or the environment, and if needed, determine whether adequate protection is proposed.

- **RFAs:** Responsiveness to any specific criteria set forth in announcements or requests (e.g., Requests for Applications [RFAs]).

**Additional Review Considerations**

- **Budget and Period Support:** Reviewers will consider whether the budget and the requested period of support are fully justified and reasonable in relation to the proposed research.

- **Authentication of Key Biological and/or Chemical Resources:** For applications involving key biological and/or chemical resources (may include cell lines, specialty chemicals, antibodies, or other biologics), the reviewers will assess the information provided in this section of the application on whether the applications described plans/methods to ensure the identity and validity of key biological and/or chemical resources.

- **Select Agent Research:** Reviewers will assess the information provided in this section of the application, including (1) the Select Agent(s) to be used in the proposed research, (2) the registration status of all entities where Select Agent(s) will be used, (3) the procedures that will be used to monitor possession, use, and transfer of Select Agent(s), and (4) plans for appropriate biosafety, biocontainment, and security of the Select Agent(s).

- **Applications from Foreign Organizations:** Reviewers will assess whether the project presents special opportunities for furthering research programs through the use of unusual talent, resources, populations, or environmental conditions that exist in other countries and either are not readily available in the United States or augment existing U.S. resources.
• **Resource Sharing Plans:** Reviewers will comment on whether the Resource Sharing Plans, or the rationale for not sharing the types of resources, are reasonable.

**IRG Recommendations**

At present, the possible recommendations by the review committee are: scoring, not discussed (ND), not recommended for further consideration (NR), or deferral (DF). All actions require a majority vote. In the event of a split vote (i.e., when two or more IRG members disagree with the majority), the recommendation is based on the majority vote, but the minority opinion is recorded in the Summary Statement. An application may be deferred if additional information is needed to make a definitive recommendation. If an application has significant and substantial scientific merit, it is given an impact score and, in the case of CSR-reviewed applications, a percentile ranking is calculated for the application. In the streamlined review process implemented at the NIH (particularly for single-project applications), the reviewers identify but do not discuss or score applications that are not in the upper half of the applications being reviewed by that committee for that round. For reviews of applications received in response to an RFA, the reviewers may be asked to identify the applications that are not in the upper half of the group of applications under review. Reviewers’ critiques of ND applications are provided as feedback to grant applicants. An application may be designated Not Recommended for Further Consideration (NR) if it lacks significant and substantial merit; presents serious ethical problems in the protection of human subjects from research risks; or presents serious ethical problems in the use of vertebrate animals, biohazards, and/or select agents. Applications designated as NR or ND do not proceed to the second level of peer review (National Advisory Council/Board), although an ND application can be considered for funding with appropriate justification. An action for scoring is equivalent to a recommendation that a grant be awarded, provided that sufficient funds are available.

**Impact Scores**

Starting in Fiscal Year 2010, a 9-point scoring system was adopted (1 = exceptional; 9 = poor). Before the review meeting, each reviewer and discussant assigned to an application will give a separate score from 1 to 9 for each of five core review criteria (Significance, Investigator(s), Innovation, Approach, and Environment). For all applications, even those not discussed by the full committee, the scores of the assigned reviewers and discussant(s) for these criteria will be reported individually on the summary statement.

Prior to the meeting, each reviewer and discussant assigned to an application will give a preliminary impact score for that application. The preliminary impact scores will be used to determine which applications will not be discussed. For each application that is discussed, a final impact score from 1 to 9 will be given by each eligible committee member (without conflicts of interest). Each member’s impact score will reflect his/her evaluation of the overall impact that the project is likely to have on the research field(s) involved, rather than a weighted average applied to the reviewer’s scores given to each criterion.

After the review meeting, the SRO will determine the overall impact score by calculating the mean score from all the eligible members’ impact scores, and multiplying the average by 10; the overall impact score will be reported on the summary statement. (Overall impact scores will not be reported for applications that are not discussed.) At this point in the grant application review process, 4 to 5 months have elapsed since the principal investigator submitted the application (see Exhibit XII).

**Percentile Rank**

In addition to an impact score, most applications reviewed by the CSR receive a percentile rank. The percentile rank represents the relative position of each impact score (along a 100.0 percentile band) among the scores assigned by the IRG during the current round of the study section plus the previous two rounds. Applications reviewed by NCI review groups receive impact scores only, and percentile ranks are not calculated for these applications.

The overall intent of percentile ranking (or “percentiling”) is to improve the comparability of scored applications across study sections and IRGs, and to minimize the impact of round-to-round quality variation. When applications are being considered for funding within an Institute, the percentile/impact score is the primary indicator of relative scientific merit.

**Summary Statements**

Immediately after the IRG meeting, the SRO prepares individual reports summarizing the recommendation for each application, called Summary Statements. The Summary Statement consists of:

- Contact information for the Program Officer handling the application
• Overall impact score and percentile (if applicable)
• Resume and summary of the discussion (only for applications that are discussed)
• Reviewer critiques and individual criterion scores
• Committee recommendations concerning the budget
• Official meeting roster

Special notations also may be included, such as a split vote, a potentially hazardous experimental procedure, or a concern about the welfare of laboratory animals or human subjects.

Before the three annual grant review meetings, copies of Summary Statements are posted on the Web as part of the Electronic Council Book. Before the NCAB meets, applicants routinely are provided with copies of their own Summary Statements by accessing the document using the NIH Electronic Research Administration Commons. Upon completion of advisory board action, the principal investigator and applicant institution are notified of the Board’s concurrence or nonconcurrence with the study section recommendation. Exhibit XIII is an example of a Summary Statement.

Post NCAB Meetings and Funding Decisions

After each NCAB meeting, NCI staff members meet to discuss and review the NCAB’s recommendations. The NCI SPL determines the paylines for the different grant mechanisms and approves the funding plans for all RFAs and other special initiatives. Applicants who will be funded are subsequently notified at the time of the award negotiation. Ideally, approximately 8 to 9 months will have elapsed since the principal investigator submitted the application.

Appeal of an IRG Recommendation

If the principal investigator believes that the review was affected by bias, conflict of interest, insufficient or inappropriate expertise, or factual errors, he/she may appeal the recommendations of the committee. Applicants who disagree with the assessment of the review group may contact the Program Director to discuss the Summary Statement and the situation relative to the application. Most often, the applicant revises and resubmits the application.

Resubmission

When an application is revised and resubmitted, it should have been structured in the following way. The introductory section of the amended application should contain: (1) a documented response to the criticisms raised by the IRG (new information, corrections, or other changes to remedy the deficiencies pointed out in the Summary Statement); (2) an indication of the modifications to the application that reflect the areas of criticism with which the principal investigator agrees. Although the principal investigator may request a change in IRG assignment, CSR retains the authority to determine whether or not an amended (or revised) application should be reviewed by a different IRG.

Project Site Visits

The purpose of a project site visit is to give the reviewers an opportunity to gather information not available in the written application to make a final evaluation regarding the merit of the application. Site visits enable the reviewers to meet with the principal investigator and other researchers, view the facilities, and raise questions or discuss research objectives. The NCI Program Director generally attends the site visits to provide program information, if needed, and to gain a better understanding of the project and the reviewers’ recommendations. In some cases, at the request of the SRO, Program Director, or Grants Management Officer, a grants management specialist or an administrative consultant will attend the site visit to provide business and administrative expertise. Following the site visit, reports based on the site visit team’s observations and findings are prepared for presentation at the IRG meeting.

Very few research grant applications reviewed by CSR require a project site visit. In contrast to those applications reviewed by CSR, some of the applications reviewed by NCI review committees require site visits because of the specialized and complex nature of their applications. Large, complex applications (such as those for Cancer Center support) routinely require a project site visit by a team of 10 to 30 expert consultants or a teleconference, depending on the number of individual program components and disciplines involved. Several members from the appropriate NCI chartered “parent” committee, as well as ad hoc consultants, form the site visit team.

ADMINISTRATIVE BUDGET NOTE: The budget shown is the requested budget and has not been adjusted to reflect any recommendations made by reviewers. If an award is planned, the costs will be calculated by Institute grants management staff based on the recommendations outlined below in the COMMITTEE BUDGET RECOMMENDATIONS section.
RESUME AND SUMMARY OF DISCUSSION: This is an application to compare the impact of school-based with community-based intervention on adolescent tobacco use. This is an excellent application that should provide insights into a most difficult problem.

DESCRIPTION (provided by applicant):
The project is designed to evaluate the effects of a community intervention aimed at reducing the prevalence of adolescent tobacco use. Fourteen small communities will be randomly assigned to receive a community intervention plus a school-based prevention program or to receive a school-based program alone. The community intervention is designed to mobilize community leaders and organizations to modify environmental influences on adolescent tobacco use so that experimentation is reduced, experimenters are prevented from becoming regular users, and regular users are encouraged to quit. Task forces will be created to (a) conduct media campaigns that promote nonuse of tobacco by adolescents, (b) increase parental skill and efforts to promote adolescent nonuse of tobacco, (c) increase screening and counseling of adolescents to encourage quitting or remaining tobacco free, (d) reduce access to tobacco products and situations in which to consume them, and (e) increase incentives for adolescent nonuse of tobacco. The study will also examine the effects of the community intervention on efforts of community organizations and leaders to affect adolescent tobacco use.

Finally, the study will examine the relationship between adolescents' exposure to social influences not to use tobacco and their attitudes, intentions, and actual use. Data from panels of seventh and ninth grade students who are followed over 2- and 3- intervals will be used to achieve this aim.

CRITIQUES
The written critiques of individual reviewers are provided in essentially unedited form in the "Critique" section below. Please note that these critiques were prepared prior to the meeting and may not have been revised subsequent to any discussions at the review meeting. The "Resume and Summary of Discussion" section above summarizes the final opinions of the committee.

CRITIQUE 1
Significance: 3
Investigators(s): 1
Innovation: 5
Approach: 4
Environment: 1

Overall Impact:
Strengths:
- This is a well designed application with significant potential impact on reducing adolescent tobacco use.

Weaknesses:
- None identified
1. Significance:

   - Evaluating the effects of community intervention aimed at reducing the prevalence of adolescent tobacco use is extremely important in developing and refining these health-related efforts.

2. Investigator:

   - Dr. Martin, Principal Investigator, is a 1973 Ph.D. from the Ohio State University in Social Psychology. He is currently a Research Scientist at the Massachusetts Research Institute, Concord, Massachusetts, and lists 7 published book chapters, 5 manuscripts in submission, and 38 publications in refereed journals in areas relevant to the grant application.

3. Innovation:

   - This project has several innovative aspects.

4. Approach:

   - The project is well designed and is expected to provide important information about the effects of community intervention aimed at reducing the prevalence of adolescent tobacco use.

5. Environment:

   - The environment at Massachusetts Research Institute is highly supportive of the proposed project.

THE FOLLOWING RESUME SECTIONS WERE PREPARED BY THE SCIENTIFIC REVIEW OFFICER TO SUMMARIZE THE OUTCOME OF DISCUSSIONS OF THE REVIEW COMMITTEE ON THE FOLLOWING ISSUES:

PROTECTION OF HUMAN SUBJECTS: ACCEPTABLE

INCLUSION OF WOMEN: ACCEPTABLE

INCLUSION OF MINORITY: ACCEPTABLE

INCLUSION OF CHILDREN: ACCEPTABLE

VERTEBRATE ANIMALS: NOT APPLICABLE

COMMITTEE BUDGET RECOMMENDATIONS: The budget is excessive for the tasks planned. Therefore, the budget is reduced by one module.

NOTICE: The NIH has modified its policy regarding the receipt of amended applications. Detailed information can be found by accessing the following URL address:
http://grants.nih.gov/grants/policy/amendedapps.htm

NIH announced implementation of Modular Research Grants in the December 18, 1998 issue of the NIH Guide to Grants and Contracts. The main feature of this concept is that grant applications (R01, R03, R21, R15) will request direct costs in $25,000 modules, without budget detail for individual categories. Further information can be obtained from the Modular Grants Website at http://grants.nih.gov/grants/funding/modular/modular.htm.

[A list of reviewers (not included here) is a part of the summary statement.]
NCI INITIAL REVIEW

NCI Referral of Grant Applications: Program Assignment

As the central receipt and distribution (referral) point, the CSR assigns applications to the NCI based on negotiated criteria (referral guidelines). Then, the NCI Referral Office refers all applications assigned to the NCI by CSR to one of the 50 NCI extramural research program areas. The NCI Referral Office staff assigns all incoming applications, tracks their review status, and distributes them to the appropriate NCI Program Director. In FY2014, nearly 14,000 grant applications were received for referral.

NCI Review of Grant Applications

In addition to CSR review, the NCI conducts its own initial review of certain specialized or complex cancer-oriented applications, including Research Program Projects, Cancer Center Support Grants, Cooperative Clinical Research Grants, Conference Activities, Research Demonstration and Dissemination Projects, SPOREs, SBIRs, training and career development, and others. These reviews are conducted by either NCI charted or ad hoc SEP peer review committees. In FY2014, the DEA reviewed 5,307 grant and cooperative agreement applications and R&D contract proposals.

NCI SROs take advantage of several electronic approaches to assist in the peer review process, including the Internet Assisted Review (IAR) that is a Web-based system that allows peer reviewers to post their preliminary impact scores and critiques to a central NIH site. This utility facilitates and expedites the premeeting review process and the postmeeting production of Summary Statements.

Five branches are responsible for organizing, managing, and reporting the scientific peer review of applications for a wide variety of grant mechanisms: the Research Programs Review Branch (RPRB), the Special Review Branch (SRB), the Research Technology and Contract Review Branch (RTCRB), the Resources and Training Review Branch (RTRB), and the Program Coordination and Referral Branch (PCRB).

The RPRB has primary responsibility for reviewing unsolicited P01s and applications for SPOREs in various disease sites. It also manages the three subcommittees of the NCI IRG that are responsible for review of program project grant applications, although the subcommittees have not been convened during the single-tier P01 review process. The SRB organizes and manages the review of applications submitted in response to NCI-issued RFAs, PAs, and PARs.

The RTCRB is responsible for the review of technology-related applications, SBIR/STTR applications and Special Topics, and R&D contracts submitted in response to RFPs. All of these reviews are conducted by SEPs and include the following types of mechanisms: P50, R03, U19, U54, U56, SBIRs (R43 and R44s), and STTRs (R41s and R42s). The PCRB provides review support for several grant applications, including conference grants (R13) and the Loan Repayment (L30 and L40) program.

The various committees are responsible for advising the NCI Director and the NCAB concerning the scientific and technical merit of grant applications assigned to the NCI for the initial review, which addresses each application’s scientific merit in terms of its discipline and the clinical implications of its research protocol. This review is conducted according to the established NIH procedures described in the CSR Initial Review section (p. 35). With the exception of Subcommittee A used to review Cancer Centers, Summary Statements are prepared in the same general format that is used by the CSR.

Once a grant application receives an NCI program assignment, an NCI Program Director follows its progress through the review process and, if an award is made, through the post-award period. For the duration of that project period, the Program Director is the contact point, negotiator, advisor, and advocate for the principal investigator. This individual evaluates the relevance of the research, considers the appropriateness of the appraisal by the study section, and makes recommendations to the NCAB regarding any need for special action in a particular case.
Selection of NCI Review Committee Members

The NCI policy for selecting review committee members specifies that, within a given IRG, representation of scientific disciplines, clinical specialties, or technical areas must reflect a proper balance of subspecialties to cover the range of applications being reviewed. The SRO of each NCI review committee determines which specialties are needed within that group. In the case of the standing subcommittees identified above, the final decision on nominations for NCI review subcommittee members is made by the Director of the DEA. Appointments to the committees also are made by the Director of the DEA. Members of the NCI review subcommittees serve overlapping terms of up to 4 to 6 years.

Since 1996, DEA SROs have worked with the NCI Office of Advocacy Relations to identify non-scientist advocates who are able and willing to participate in the peer review process. These advocates, individuals who are either cancer patients or relatives of cancer patients, assist in the peer review of applications in which human subjects are involved. They assess issues related to:

- factors that may affect study design;
- feasibility of plans for recruitment/retention and follow-up of subjects;
- feasibility of protocols with specific populations (e.g., complexity, compliance);
- clarity and patient acceptability of protocols;
- feasibility of protocols in the context of total patient care;
- cultural and socioeconomic aspects of protocol implementation;
- outreach and special challenges (e.g., need for multicultural staff);
- Community Advisory Board (e.g., composition and role);
- ethical issues, human subjects protection, adequacy of consent forms; and
- inclusion of women/minorities/children in the trial.

CSR/NCI Interface

Because of the structure and mechanics of the assignment process, the relationship between the NCI and CSR is continuous, dynamic, and interactive. During the assignment process, there is interaction between referral officers and the SRO of the IRG to which the application is assigned. After the assignments are made and the IRGs and the NCI have received electronic copies of the applications, SROs and NCI staff examine the appropriateness of the assignments to the IRGs. In cases of questionable assignments, the referral officers and SROs discuss the application. If no agreement is reached, the final decision is made by the Office of the Director in the Division of Receipt and Referral (DRR) of CSR. Questions regarding assignments usually are handled by the Office of the Deputy Director (DRR), which makes the final determination, after conferring with the NCI staff and the Referral Officer.

CSR staffers also review questions from applicants who have been notified about the assignment of their applications. Following discussions involving the Referral Officer and the appropriate SROs, a final decision is made by the Director, DRR, CSR.

Review of Contract Proposals

The NCAB has no direct involvement with the Research and Development (R&D) contract program of the NCI. R&D contract concepts are reviewed by the BSA.

The contract solicitation process begins when an NCI program staff member (usually the individual who will become the Project Officer) develops a concept for a contract project through personal initiative, discussion with advisory groups, consultation with others in the program, and/or interactions with members of the scientific community. The relevance, priority, and need for the anticipated project are assessed by NCI program staff, and the concept is subjected to a series of internal clearances, including review by the Scientific Program Leadership (SPL) of the NCI. Federal regulations (the 1974 Amendments to the National Cancer Act and Section 75 of the Public Health Service Act) require presolicitation peer review of the project concept before an RFP may be issued. NCI policy requires concept review of all intra- and interagency agreements, and all renewals and recompetitions of existing contracts and extensions of $100,000 or more for a 6-month or longer
period. This review is performed by the SPL Committee and BSA (new concepts and recompetitions with a change in scope).

In reviewing a project concept, the BSA evaluates a proposed concept according to the following criteria:

- congruence of the proposed project with the missions and objectives of the Institute;
- scientific merit of its purpose, scope, and objectives;
- appropriateness of the period of performance for accomplishing project objectives;
- proper classification of the proposed project as a resource or research contract and competitive or noncompetitive contract; and
- consideration of whether the proposed project should be supported using the grant mechanism or cooperative agreement instead of a contract.

Once a concept is approved and recommended to the Division Director, the Project Officer, consulting with the Contracting Specialist in the NCI Office of Acquisitions (OA), prepares a statement of work and evaluation criteria. The documents are incorporated into a Request for Contract Project Plan, which is the basis for the official RFP. This document then is presented to the division’s senior scientific and management staff for review, comment, and approval. A copy of the plan also is forwarded to the DEA to help verify the evaluation criteria and establish a timetable for the procurement process. The final version of the project plan is incorporated into the RFP by the Contracting Officer, in conjunction with the Project Officer. RFPs must be published in the Commerce Business Daily and/or the NIH Guide for Grants and Contracts. Occasionally, an RFP may receive wider distribution through publication in scientific journals. Proposals are received by the OA and are checked to be sure they fulfill the RFP requirements and conform to Federal regulations.

R&D proposals that are submitted by the private sector in response to an RFP are evaluated for technical merit by ad hoc SEP review groups in a manner similar to that used for the peer review of grant applications. The purpose of the technical merit review is to obtain expert advice on the qualifications of the offeror’s staff, the merit of the scientific/technical approaches, the sufficiency of staff and institutional experience, and the availability of equipment and facilities. A DEA RTCRB staff member serves as the SRO for each contract review committee. The SROs schedule review sessions, send proposals to committee members in advance of the sessions, and supervise the preparation of the contract review summary reports—brief synopses of the review sessions that contain the numerical scores (as required) and reflect the deliberations and considerations of the reviewers.

In arriving at its recommendations, the peer review committee reviews each proposal. The results of its deliberations are documented by the NCI SRO, who makes the committee findings available to the Contracting Officer. At least three reviewers are assigned to report in depth on each contract proposal during the review meeting. Proposals are reviewed for technical merit and rated for conformance to the evaluation criteria published in the RFP. If competitive, they are scored independently by each committee member, based upon the weighted review criteria in the RFP. The individual scores are totaled and averaged to produce a technical merit score for each proposal. Concurrently but independently, the OA evaluates proposals for business considerations.

Project Officers are the NCI program staff members who are responsible for developing and supervising the contract projects. They attend review meetings to provide factual information, but are not permitted to make judgmental or evaluative comments. Representatives of the OA must attend the review sessions to provide guidance on policy and regulations. Review is conducted in accordance with Federal conflict-of-interest regulations, summarized on pp. 53, 55, and 60.

Following the review session, the SRO forwards the minutes containing the scores, ranking, and individual rating sheets to the Contracting Officer of the OA, who then convenes a Source Evaluation Group (SEG). This group usually consists of the Project Officer and other program staff members, who advise the Contracting Officer on the establishment of a competitive range, based upon technical merit scores, cost, and other considerations. Occasionally, site visits are determined to be necessary subsequent to completion of the technical review.

The Contracting Officer informs each offeror in the competitive range of the proposal’s deficiencies, ambiguities, or other considerations, as identified.
Exhibit XIV. NCI Contract Review Process

by the reviewers or members of the SEG. Offerors are given an opportunity to make minor adjustments in their proposals, which then are reviewed by the contracting and program staff, who serve as a Source Selection Group (SSG). The final decision regarding award of a contract rests with the Contracting Officer, who arranges for negotiations with the prospective contractor with advice from the SSG. The total contracting cycle requires 9 to 10 months from receipt of proposals to issuance of an award. Exhibit XIV portrays the NCI contract review process.

Following award, the NCI Project Officer performs project surveillance, assisted by the OA. The OA is responsible for debriefing competitors.

NATIONAL CANCER ADVISORY BOARD REVIEW

NCAB Responsibilities

The National Cancer Advisory Board is responsible for the final review of all grant applications referred to the NCI. The Board recommends to the Director of the NCI approval of meritorious grant applications. The NCAB appraises all grant applications with reference to the needs of the Institute and the priorities of the National Cancer Program. The NCAB also performs the second-level review of all FDA grants and cooperative agreements. The review responsibilities of the NCAB are shown in Exhibit XV.

The Health Research Extension Act of 1985 changed the reporting requirements of the NCAB. Rather than submit a separate, annual report on the progress of the National Cancer Program to the Secretary of HHS, the NCAB may prepare comments on the Board’s activities and the NCI’s progress in meeting its objectives, then make recommendations regarding future directions of the NCI. These comments then would be included in the NCI’s biennial report, which in turn is included in the NIH Director’s biennial report to the President and to Congress. In addition, the Federal Advisory Committee Act requires that the President report annually to the Congress on advisory committees. This report is prepared by each IC Committee Management Officer; the General Services Administration compiles the information from each agency and submits the
Exhibit XV. Grant Review Responsibilities of the NCAB

Receive and Review Materials (Prior to a Board Meeting)

- Summary Statements
- List of all applications identified by IRG as having ethical problems, such as biohazard risk, gender, etc.
- List of applications determined to have biohazard risks or animal welfare problems (no action required).
- List of merit award nominations and extensions.
- List of foreign grants meeting criteria for funding.
- Staff recommendations for special actions.

Actions To Be Taken

- Present subcommittee recommendations to the full Board.
- Review staff recommendations for special actions.
- Act on IRG recommendations.
- Review and approve guidelines delineating the NCI staff administrative responsibility.

The Biomedical Research and Training Amendments of 1978 (P.L. 95-6221) further expanded the membership and responsibilities of the Board, with particular emphasis on the areas of environmental and occupational carcinogenesis. The Board now consists of 30 members, 12 of whom are ex officio, nonvoting members and 18 of whom are voting members. The Director of the DEA serves as the Executive Secretary of the Board. The Health Research Extension Act of 1985 did not significantly change the authority or responsibility of the NCAB.

NCAB Legislative Authority

In 1937, P.L. 75-244 established the National Advisory Cancer Council to advise the newly created NCI. In 1971, the National Advisory Cancer Council was renamed and restructured as the 23-member NCAB by P.L. 92-218, the National Cancer Act. In accordance with P.L. 92-453, the Federal Advisory Committee Act, the NCAB was chartered by the Secretary of HHS. The Board’s mandate is continuous, although the NCAB is rechartered every 2 years.

The National Cancer Act of 1971 (P.L. 92-218) and the Health Research Extension Act of 1985 (P.L. 99-158) specify that two-thirds of the appointed members should be leading representatives of the health and scientific disciplines relevant to cancer, and one-third of the members should be from the general public, including leaders in the fields of public policy, law, health policy, economics, and management. P.L. 99-158 continues the requirement that five or more of the appointed members be knowledgeable in environmental carcinogenesis, including occupational and dietary factors.

NCAB Ex Officio Members

Ex officio members of the Board include the following officials or their designees:

- Secretary of HHS;
- Director of the Office of Science and Technology Policy;
- Director of NIH;
- Chief Medical Director of Veterans Affairs;
• Director of the National Institute for Occupational Safety and Health;
• Director of the National Institute of Environmental Health Sciences;
• Secretary of Labor;
• Commissioner of the Food and Drug Administration;
• Administrator of the Environmental Protection Agency;
• Chairman of the Consumer Product Safety Commission;
• Assistant Secretary of Defense for Health Affairs; and
• Director of the Office of Energy Research of the Department of Energy.

NCAB Meetings

The Board meets at the call of the Director of the NCI or the Chairperson, not less than four times a year. Meetings usually last for 1 to 2 days. Summary Statements are reviewed three times per year at regularly scheduled meetings. The December NCAB meeting is reserved for the NCI intramural laboratory and extramural program review. A joint NCAB/BSA meeting is held twice annually during the scheduled June and November/December meeting dates. Meetings may be face-to-face or virtual.

NCAB meetings are open to the public when Summary Statements are not being discussed. Scheduled NCAB meeting dates are published in the Federal Register (https://www.federalregister.gov), as required by HHS regulations. Attendance at the closed grant review sessions is limited to Board members, Scientific Review Officers, the NCI Director, appropriate NCI and NIH staff, and designated representatives of the Secretary of HHS. In accordance with a Memorandum of Understanding (MOU), select Food and Drug Administration (FDA) staff also attend NCAB closed sessions. A quorum for conducting business will consist of a majority of the currently appointed members.

Approximately 6 to 8 weeks before the NCAB meeting, Summary Statements within the competitive range for applications to be reviewed at the upcoming meeting are made available to all NCAB members via the NIH Electronic Council Book (ECB). This is a restricted access website that allows NCAB members to view all of the Summary Statements, as well as the grant applications assigned to them for review based upon their areas of scientific interest. (Note: NCAB members are not given access to Summary Statements from their own institutions.) By the time the NCAB meets, approximately 3,500 Summary Statements will have been made available to the Board members. As described in its Charter, a key role of the NCAB is to “advise, assist, consult with, and make recommendations to the Secretary, and the Director, National Cancer Institute, ... relating to support of grants and cooperative agreements, following technical and scientific peer review.” This important function is accomplished in the closed session of the NCAB meeting by a committee of the whole known as the Special Actions Subcommittee.

NCAB Subcommittees

To expedite the Board’s work, four standing subcommittees and one ad hoc committee have been established to provide individual review of applications requiring special attention or detailed discussion, and to handle other Board-related business as necessary. The subcommittees are:

• Subcommittee on Cancer Centers
• Subcommittee on Clinical Investigations
• Subcommittee on Planning and Budget
• Subcommittee on Special Actions
• Ad Hoc Subcommittee on Global Cancer Research

Each Board member is assigned to serve on one or more of the above subcommittees. (Note: The Subcommittee on Special Actions functions as a Committee of the Whole.) Subcommittee meetings are announced in the Federal Register. During the NCAB meeting, each subcommittee chairperson makes a report of current activities. After discussion, the NCAB votes for the acceptance, rejection, or modification of each report.

Special Actions Subcommittee

NCI’s Division of Extramural Activities prepares for review by the NCAB special reports detailing grant applications that involve human subjects, animal welfare, biohazard risks, foreign grants, and inadequate representation/justification of gender, minorities, and children. The latter materials are posted on the Electronic Council Book (ECB) 1 to 2 weeks prior to the NCAB meeting. In addition to these special reports, all NCAB members receive appeal letters from principal investigators who disagree with IRG recommendations.
The appeal documentation is sent by courier to NCAB members.

If a Board member has a question about an application or thinks that additional information would be helpful, he/she is encouraged to contact the NCI Program Director responsible for that application. The Program Director’s name and telephone number appear in the upper left-hand corner of each Summary Statement. Further discussion of applications requiring special consideration may take place during the full Board meeting in closed session.

Applications that may require special consideration or detailed review include those in which:

- a policy issue has been identified;
- the summary of the discussion suggests that members of the review panel had divergent opinions;
- the recommended budget is unusually large or does not appear to be appropriate to complete the proposed work;
- some aspect of the recommendation from the IRG is questioned; or
- the research proposed is of particular interest or concern.

Foreign Grants: Applications from foreign institutions must be brought to the attention of the Board and identified for possible funding. These applications are reviewed for concurrence with the NIH policy on foreign grants. Grant applications from domestic institutions that contain substantial foreign components do not require special NCAB concurrence, except when special considerations are involved (e.g., unusually large budget for the foreign component, potential controversy, or other extenuating factors).

IRG Concerns: All applications for which reviewers have concerns about or objections to the participation of human subjects must be individually called to the attention of the Board, whether or not the IRG has recommended them for scoring. The Board is routinely informed of applications for which an IRG has expressed concern about any biohazard, animal, child, gender, or minority welfare concern. Information items may be presented to the Board by NCI staff as appropriate.

Appeals: The Board is provided with a list of appeal letters received for the meeting as well as access to the relevant summary statements. Appeal letters are assigned to 3 or 4 Board members for review based on their expertise and conflict of interest guidelines. Program and review staff are present and available if a Board member has questions about specific appeals. Prior to consideration by the Board, staff determines if there is sufficient merit in the appeal to recommend corrective action. Appealed applications where program and review staff determine that the review was flawed are deferred for re-review and are not presented to the Board (i.e., administratively resolved). Appeals where program and staff agree with the study section’s review and determine there is no merit to the appeal are listed as “No Special NCAB Action Recommended.” If program and review staff does not agree on a course of action, a staff recommendation will be presented to the Board for their action. Only two outcomes are possible following consideration of an appeal letter by the NCAB:

- The Board may concur with the study section’s recommendation and deny the appeal. Although factual errors or other issues may be evident, they may determine that these factors would be unlikely to alter the final outcome of the review.
- The Board may concur with the appeal and recommend that the application be deferred for re-review.

Special Council Review: NCAB members provide additional consideration of new and renewal applications from well-funded Program Director(s)/Principal Investigator(s) [PD(s)/PI(s)] who receive more than $1 million in direct costs of NIH funding per year to support the more common Research Project Grants (RPG) and Cooperative Agreements. These applications are generally investigator-initiated research projects.

Special Council Review (SCR) does not represent a cap on total NIH funding. The Executive Secretary of the NCAB asks 2-3 members of the Board to assess the merit of funding applications that provide unique opportunities to advance research that is both highly promising and distinct from other funded projects from the PD/PI.

Applications excluded from SCR review are:

- Pending applications received in response to requests for applications (RFAs)
- P01s and other multi-component RPGs, unless all the PDs/PIs and sub-project investigators exceed the $1 million threshold
• Multi-PD/PI projects unless all the PDs/PIs exceed the $1 million threshold
• Sub-projects within complex applications
• Administrative supplements
• Support for investigator training and career development and center grants.

Applications for SCR are discussed in closed session.

**Delegated Authorities:** Every year at the February NCAB meeting, the members of the Board are asked to reapprove several authorities that deal with the Institute’s ability to: (1) appoint special experts for limited service; (2) appoint advisory committees to advise the Director; and (3) expeditiously manage the NCAB review of grant applications. In the latter case, the authorities describe and reaffirm the NIH-wide policies used to manage Board review. These include the following: Individual National Research Service Award Applications (postdoctoral fellowships) also are exempt from this presentation requirement. In addition, applications over the 50th percentile and applications that were not discussed will not have their Summary Statements presented to the NCAB unless the Institute is considering an award. Applications assigned raw scores that are not percentiled will not be presented to the NCAB if the score is lower than 50. Expedited concurrence is reaffirmed. Finally, the Board delegates to the Director of the NCI permission to allow staff to negotiate adjustments in dollars or other terms and conditions of grant and cooperative agreement awards for those applications recommended by the Board.

**Expedited Council Concurrence**

The NCI has implemented a procedure to streamline the concurrence with IRG recommendations to expedite funding actions by the Institute. The expedited NCAB approval process is used for percentiled R01s reviewed by CSR and for all R21s, except for those applications submitted in response to a set-aside (RFA or PA with a set-aside). The Executive Secretary of the NCAB selects four members of the NCAB to provide en bloc concurrence on behalf of the entire NCAB, and the Institute establishes a “range of consideration.” For every application within the “range,” the name of the principal investigator, institution, project title, and priority score/percentile are provided. As the CSR IRGs meet and their scores are added to the NIH IMPAC 2 database, the four NCAB members mentioned above receive periodic e-mail notifications regarding applications that await their review and expedited council concurrence.

Applications do not undergo expedited review if they involve foreign institutions or if the Summary Statement expresses concerns with regard to human subjects, animal welfare, biohazards, or inadequate representation/justification of gender and/or minorities and/or children. (Note: Any application can be identified for NCAB discussion and removed from this process by any NCAB member.)

The NCAB members approve grant applications using the NIH ECB expedited process, and a notification letter is sent to the principal investigator by the Grants Administration Branch of the NCI, notifying the principal investigator of the NCAB’s approval and plans for expedited funding.

**Nonconcurrence**

Usually the Board concurs with the initial reviewers’ recommendations. On occasion, however, the Board may vote to change the IRG recommendations in the following ways:

• If the NCAB disagrees with an initial review based upon scientific or technical merit, the action is deferral. The application is returned for a second review by either the same or a different IRG. If, after deferral and a second review, the NCAB still wishes to change the recommendation, it may do so.
• The NCAB may recommend that an application be considered for exception funding, in which case the application need not be returned to the IRG for an additional review.
• The NCAB may recommend that an application receiving a favorable recommendation in initial review not be considered for support for reasons other than lack of scientific or technical merit.
• In the case of a split vote from the IRG, the NCAB may accept the minority opinion without returning the application for further review.
• The NCAB may reverse a “not discussed” recommendation from an IRG and recommend that the application be considered for exception funding.

In all cases of nonconcurrence with the IRG recommendation, within 10 working days after the NCAB meeting, the NCAB must communicate to the SRO of the IRG its rationale for questioning or disagreeing with the IRG decision.
Mail Ballots

In some circumstances, a grant application does not come before the full Board for review; instead, the Summary Statement is sent to individual Board members for review by mail ballot (see Exhibit XVI). Board members may vote by fax for concurrence or nonconcurrence with the IRG recommendations. They may note any questions or concerns regarding an application on the mail ballot; if necessary, the issue is raised at the next full Board meeting. Applications requiring immediate attention are handled in this manner.

Conflict of Interest

Members of the NCAB are Special Government Employees (SGE). By definition, an SGE is an officer or employee in the Executive Branch of the Federal Government who is appointed to perform temporary duties, with or without compensation, for a period not to exceed 130 days during any period of 365 consecutive days. During the term of their appointments, SGEs must be aware of relevant statutes regarding criminal conflicts of interest, and they must follow defined standards of ethical conduct.

The Office of Government Ethics (OGE) has issued the following new conflict of interest guidelines for State multi-campus institutions and private institutions and affiliates.

Policy for State Multi-Campus Institutions:
The OGE has provided a regulatory waiver under 5 CFR 2640.203(c) for SGE Federal advisory committee members employed in one university of a State multi-university system to review applications from a separate university of the same system, provided the member has no conflicting multi-institutional duties and responsibilities that affect the entire educational system.

Policy for Private Institutions and Affiliates:
In addition, an SGE member of an advisory committee who is employed by a private institution may participate in the review of a grant application submitted by an affiliate of the private institution if the SGE: does not hold a joint appointment with that affiliate, does not have affiliate-wide responsibilities, and has a waiver to do so.

At each Board meeting, Board members sign a statement certifying that they did not participate in the discussion of or vote on any application from their own institution or an institution in which they have a financial interest.

In addition, the NCAB has agreed not to reverse the IRG action on any application from a member institution. Instead, all such applications in which Board opinion differs from that of an IRG are referred to an appropriate IRG for review.

AWARD OF GRANTS

Selection for Funding

Many more grants are approved by the NCAB than can be financed from the NCI budget. Early in the fiscal year, the NCI formulates funding guidelines for its programs based upon expected allocations of funds, program requirements, and prior history. Final funding decisions are made by the Director of the NCI and NCI staff, based primarily on IRG percentile/impact score ratings of scientific merit, the Institute’s program objectives, avoidance of duplicate effort, and other considerations. The funding mechanisms are reevaluated prior to each grant review cycle and adjusted to the current level of funds available and future funding.

Administrative/Business Review

Following the NCAB grant review session, the NCI conducts an administrative/business review of all applications selected for funding. Applications are reviewed for compliance with NIH policies and for necessary or desirable adjustments in the amounts and terms of the recommended awards.

Early Awards

The NCI also has established guidelines, approved by the NCAB and the Director of the NIH, for the award of R01 grants subjected to early council concurrence (vide supra). According to these guidelines, applications eligible for early award include:

- applications from grantee institutions within the United States and its territories only; and

- applications whose IRG priority score is at least as high as what was required for funding in the last round or what is anticipated for the next round.

Applications not eligible for early award include:

- applications from foreign institutions and organizations. NIH policy requires that applications from foreign institutions and organizations considered for funding must first be called to the attention of the Board; and
MAIL BALLOT

Please return by noon, September 25, 2012

NATIONAL CANCER ADVISORY BOARD
Division of Extramural Activities

The grant applications listed on the attached sheet have received initial review by the appropriate study section but were not listed with the applications which were reviewed by the September 2012 meeting of the NCAB. We are requesting your concurrence with the study section recommendations by this mail ballot in order that these applications may be considered for funding action. If you wish to register nonconcurrence with any of the recommendations, please do so, noting that we would appreciate its return no later than September 25, 2012. Please FAX your ballot to Dr. Vener at 301-402-0742.

(Board Member’s printed name and signature) Date
• applications with identified policy problems, such as ethical issues or hazardous experiments. Awards will not be issued until the problem has been resolved.

**Notice of Award**

The list of applications selected for payment is signed electronically by the NCI Program Director and the Division Director. The signed documents are forwarded to the Extramural Financial Data Branch of the NCI, and the Grants Management Specialist negotiates the award if significant adjustments are required prior to award. The funds then are obligated and recorded in the NIH official accounting records.

For each application selected for payment, a Notice of Award (NoA) is issued by the Grants Management Officer. NoAs are sent solely via e-mail to grantee organizations and are accessible in the eRA Commons. It contains the name and address of the grantee institution and the title of the project. The NoA also names the principal investigator(s) under whose direction the work is to be carried out, the direct and indirect cost awarded, the period of the grant, future years of support, and any special conditions or restrictions under which the grant is awarded. Exhibit XVII is a (fictitious) sample of a Notice of Grant Award.

Congress must be alerted at least 45 hours before the issuance of each new and renewed grant award, so that the appropriate member of Congress may notify his or her constituents. If the award exceeds $1 million, 72 hours’ advance notice is required, so that the White House may be informed. This requirement is fulfilled by forwarding a copy of the award notice to the NIH Office of Congressional Liaison at the same time the approval list is signed.

**SPECIAL CONCERNS**

**Conflict of Interest**

A number of procedures have been established by the HHS and the NIH to avoid violation of conflict of interest laws and regulations. Some of these procedures have been described in brief in the sections on CSR and NCI review (pp. 31-55). HHS guidelines for the conduct of peer review provide that: When a member of any given peer review group or a member’s spouse, parent, child, partner, or close professional associate is named on a grant application or contract proposal as the principal investigator (or as an investigator who is currently, or is expected to be, responsible for conducting a project), that peer review group may not review the particular application or proposal. Instead, the application or proposal must be evaluated by another chartered or ad hoc group.

When peer review group members have participated in reviewing contract projects during development of detailed project approaches or RFPs, or in post-RFP evaluations, no contracts resulting from that solicitation may be awarded to those members or their relatives, close professional associates, or organizations. Participation in presolicitation project concept review and recommendations only does not preclude peer group members (or their associates, relatives, or institutions) from receiving subsequent contract awards, provided such reviews and recommendations are limited to the broad purposes and objectives of proposed projects.

To help avoid conflicts of interest and undue influence, and to help ensure continuing objectivity in the peer review process, I/C staff may not participate as members of scientific peer review groups in reviewing projects, applications, or proposals if they have been or are expected to be involved in decisions or actions in the award and administration of the corresponding grants or contracts. Project Officers and other I/C staff may attend meetings of peer review groups that are evaluating applications, projects, or proposals within their purview, so that they may provide essential technical, administrative, and program information. However, they may not join in the scientific technical evaluations and recommendations of peer groups concerning those projects.

After scientific peer review meetings, the NCAB Executive Secretary must obtain written certification from all consultants that they have not participated in any reviews of proposals or applications in which they or their close relatives, associates, or organizations have a financial interest. Voting members of the Board must sign a conflict of interest document at NCAB meetings. Exhibit XVIII is an example of the certification statement signed by NCAB voting members.

**Confidentiality**

Regulations prohibit the disclosure to unauthorized persons of information obtained by the NIH in connection with a grant application. Review materials and proceedings of review meetings are privileged communications prepared for use by consultants and staff only. Members of the NCAB are requested to leave all review materials with the Executive Secretary at the conclusion of the closed
Exhibit XVII. Sample Notice of a Grant Award

Grant Number: 1R01CA999999-01  
Principal Investigator(s): 
Andrew Martin, PHD

Project Title: Community Intervention to Reduce Adolescent Tobacco Use

Administrative Coordinator
Massachusetts Research Institute
500 Aspen Lane
Concord, MA 02134

Award e-mailed to: THOMASE@MRI.EDU

Budget Period: 01/01/2010 – 12/31/2010
Project Period: 01/01/2010 – 12/31/2013

Dear Business Official:

The National Institutes of Health hereby awards a grant in the amount of $337,500 (see “Award Calculation” in Section I and “Terms and Conditions” in Section III) to Massachusetts Research Institute in support of the above referenced project. This award is pursuant to the authority of 42 USC 241 42 CFR 52 and is subject to the requirements of this statute and regulation and of other referenced, incorporated or attached terms and conditions.

Acceptance of this award including the “Terms and Conditions” is acknowledged by the grantee when funds are drawn down or otherwise obtained from the grant payment system.

Each publication, press release or other document that cites results from NIH grant-supported research must include an acknowledgment of NIH grant support and disclaimer such as “The project described was supported by Award Number R01CA999999-01 from the National Cancer Institute. The content is solely the responsibility of the authors and does not necessarily represent the official views of the National Cancer Institute or the National Institutes of Health."

Award recipients are required to comply with the NIH Public Access Policy. This includes submission to PubMed Central (PMC), upon acceptance for publication, an electronic version of a final peer-reviewed, manuscript resulting from research supported in whole or in part, with direct costs from National Institutes of Health. The author’s final peer-reviewed manuscript is defined as the final version accepted for journal publication, and includes all modifications from the publishing peer review process. For additional information, please visit http://publicaccess.nih.gov/.

Award recipients must promote objectivity in research by establishing standards to ensure that the design, conduct and reporting of research funded under NIH-funded awards are not biased by a conflicting financial interest of an Investigator. Investigator is defined as the Principal Investigator and any other person who is responsible for the design, conduct, or reporting of NIH-funded research or proposed research, including the Investigator’s spouse and dependent children. Awardees must have a written administrative process to identify and manage financial conflict of interest and must inform Investigators of the conflict of interest policy and of the Investigators’ responsibilities. Prior to expenditure of these awarded funds, the Awardee must report to the NIH Awarding Component the existence of a conflicting interest and within 60 days of any new conflicting interests identified after the initial report. Awardees must comply with these and all other aspects of 42 CFR Part 50, Subpart F. These requirements also apply to subgrantees, contractors, or collaborators engaged by the Awardee under this award. The NIH website http://grants.nih.gov/grants/policy/coi/index.htm provides additional information.

If you have any questions about this award, please contact the individual(s) referenced in Section IV.

Sincerely yours,

Bill Smith
Grants Management Officer
NATIONAL CANCER INSTITUTE

---

**SECTION III – TERMS AND CONDITIONS – 1R01CA999999-01**

This award is based on the application submitted to, and as approved by, NIH on the above-titled project and is subject to the terms and conditions incorporated either directly or by reference in the following:

- The grant program legislation and program regulation cited in this Notice of Award.
- Conditions on activities and expenditure of funds in other statutory requirements, such as those included in appropriations acts.
- 45 CFR Part 74 or 45 CFR Part 92 as applicable.
- The NIH Grants Policy Statement, including addenda in effect as of the beginning date of the budget period.
- This award notice, INCLUDING THE TERMS AND CONDITIONS CITED BELOW.

(See NIH Home Page at 'http://grants.nih.gov/grants/policy/awardconditions.htm' for certain references cited above.)
This institution is a signatory to the Federal Demonstration Partnership (FDP) Phase V Agreement which requires active institutional participation in new or ongoing FDP demonstrations and pilots.

An unobligated balance may be carried over into the next budget period without Grants Management Officer prior approval.

This grant is subject to Streamlined Noncompeting Award Procedures (SNAP).

In accordance with P.L. 110-161, compliance with the NIH Public Access Policy is now mandatory. For more information, see NOT-OD-08-033 and the Public Access Website: http://publicaccess.nih.gov/.

Treatment of Program Income:

**SECTION IV – CA Special Terms and Conditions – 1R01CA999999-01**

**INFORMATION:** In a continuing effort to provide exceptional customer service, the NCI Office of Grants Administration has set up a Feedback address on its web site (http://www.nci.nih.gov/admin/gab/index.htm). General concerns and issues related to NCI grants policies, procedures, and practices can be sent to the Customer Liaison using this feature. Specific questions or concerns related to this grant should be addressed to the Grants Management Specialist listed in the Terms of Award.

**INFORMATION:** This award, including the budget and the budget period, has been discussed between Bill Smith of the National Cancer Institute and Evan Thomas on November 24, 2008.

**STAFF CONTACTS**

The Grants Management Specialist is responsible for the negotiation, award and administration of this project and for interpretation of Grants Administration policies and provisions. The Program Official is responsible for the scientific, programmatic and technical aspects of this project. These individuals work together in overall project administration. Prior approval requests (signed by an Authorized Organizational Representative) should be submitted in writing to the Grants Management Specialist. Requests may be made via e-mail.

session of the NCAB meeting. Privileged information in grant applications must not be used to the benefit of the reviewer or shared with anyone.

Under no circumstances should consultants advise applicants of recommendations or discuss the review proceedings with applicants. Premature advice to the applicants represents an unfair intrusion into the privileged nature of the proceedings and invades the privacy of fellow consultants serving on review committees and site visit teams. The protection of the confidentiality of review proceedings is in the best interest of the highly respected NIH peer review system and the NIH tradition of allocating public funds on the basis of research excellence.

Communication With Applicants

There should be no direct communication between members of the NCAB and the applicants. In the event such a contact occurs, the Executive Secretary of the NCAB must be notified immediately. All communications are handled by the Executive Secretary of the NCAB. Telephone inquiries and correspondence from applicants should be referred or sent directly to the Executive Secretary.

Freedom of Information and Privacy Acts

The Freedom of Information Act (P.L. 93-502) and the Privacy Act (P.L. 93-579), both enacted in 1974, have affected the NIH review process. The Freedom of Information Act (FOIA) provides for disclosure of all Federal records, unless they are covered by one or more of nine exemptions. The NIH seeks the advice of grantees when receiving requests for grant materials. FOIA officials ordinarily release funded grant applications but delete patentable and other commercial information and any information that would invade personal privacy. They do not release grant applications that have never been funded, nor do they release the opinion portions of site visit reports and Summary Statements. The Privacy Act safeguards the privacy of individuals in the face of this disclosure.

Under the Privacy Act, principal investigators upon request may have access to documents generated during the review of their grant applications. Such documents include site visit reports, Summary Statements, and reviewers’ written comments, if available. Reviewers’ written comments, however, are not retained after their substance has been incorporated into Summary Statements or site visit reports. Exhibit XIX compares and contrasts the major points of the two Acts.

Research Involving Human Subjects

The Public Health Service Act, as amended in 1974 (P.L. 93-348) and 1985 (P.L. 99-157), requires that, in accordance with HHS Regulations (45 CFR 46), all research grant applications and contract proposals involving human subjects must be evaluated by the NIH IRGs and I/C staff for adequacy of protection for human subjects. This evaluation must take into account the risks to the subjects, the adequacy of protection against these risks, the potential benefits of the proposed research to the subjects and others, and the importance of the knowledge to be gained.

Applicant organizations have the primary responsibility for safeguarding the rights and welfare of individuals who participate as subjects in research activities supported by the NIH. However, the NIH also relies on its scientific review groups and National Advisory Councils or Boards to evaluate, for compliance with the HHS human subject regulations, all applications and proposals involving human subjects.

There are several considerations for review of applications involving human subjects. These considerations can be clustered into two broad areas: protection of subjects from research risks, and the inclusiveness of the study population. Protection issues include questions regarding safety and welfare of the subjects, including data and safety monitoring where applicable. Inclusion issues reflect the appropriate involvement of women, minorities, and children.

Assessment of scientific and technical merit of applications involving human subjects must include an evaluation of the proposed composition of the study population and its appropriateness for the scientific objectives of the study. If representation of women, minorities, or children in the study design is considered to be inadequate to answer the scientific question(s) addressed, and if there appears to be inadequate justification for the selected study population, reviewers should consider this to be a scientific weakness or deficiency in the study design and must keep this in mind when assigning a priority score.

Based on the evaluation of whether the applicant has adequately addressed human subjects protection, the study section may score the application
CONFLICT OF INTEREST CERTIFICATION
NATIONAL CANCER ADVISORY BOARD

February 4, 2015

This will certify that, during the review of applications by the National Cancer Advisory Board on February 4, 2015, I absented myself so as not to participate in the discussion of, nor did I vote on, any application or project in which, to my knowledge, any of the following has a financial interest: (a) myself or my spouse, parent, child, or close professional associate; (b) any organization in which I am serving as an officer, director, trustee, partner, or employee, or am otherwise similarly associated; and any organization with which I am negotiating or have any arrangement concerning prospective employment or other similar association.

I fully understand the confidential nature of the applications and summary statements and related committee discussions, and agree to respect the privileged status of the information contained in these documents.

In Board actions in which we voted on a block of applications without discussing any individual application – the “en bloc” actions – my vote did not apply to any application from any institution fulfilling the criteria in the above statements.

with no concerns or with comments or concerns that may affect the score to a level commensurate with the seriousness of the concern. A “concern” occurs when a scientific review group uncovers a finding about human subjects that requires resolution by program staff prior to award; a “comment” occurs when a scientific review group makes an observation that will be communicated in the Summary Statement as a suggestion to the principal investigator. No awards are made until all expressed concerns about human subjects have been resolved to the satisfaction of the NIH.

More detailed instructions for reviewing grant applications involving human subjects, as well as exemptions, are available at: http://grants.nih.gov/grants/peer/hs_review_inst.pdf.

**Inclusion of Women and Minorities as Subjects in Clinical Research**

It is the policy of the NIH that women and members of minority groups and their subpopulations must be included in all NIH-funded clinical research (see Appendix H), unless a clear and compelling rationale and justification establish that inclusion is inappropriate with respect to the health of the subjects or the purpose of the research. Cost is not an acceptable reason for exclusion, except when the study would duplicate data from other sources. Women of childbearing potential should not be routinely excluded from participation in clinical research.

The inclusion of women and members of minority groups, as well as their subpopulations, must be addressed in the research design in a way that is appropriate to the scientific objectives of the study. The research plan should describe the composition of the proposed study population in terms of sex/gender and racial/ethnic group, as well as a rationale for selection of subjects. Such a plan should contain a description of the proposed programs for recruiting women and minorities as participants. The objective should be to actively recruit and retain the most diverse study population, given the purposes of the research project. When an NIH-defined Phase III clinical trial (see Appendix J) is proposed, the Research Plan must include a description of plans to conduct valid analysis by sex/gender, racial/ethnic groups, and relevant subpopulations, if applicable. Additional information concerning the NIH Policy on Inclusion of Women and Minorities as Subjects in Clinical Research is available at: http://grants.nih.gov/grants/funding/women_min/women_min.htm.

**Research Involving Animals**

The Animal Welfare Act of 1966, as amended in 1970, 1975, and 1985 (P.L. 89-544, 91-579, 94-279, and 99-198) provides for the proper care of animals used for research purposes. The Public Health Service Act, as amended in 1985 (P.L. 99-158), mandates specific additional requirements for research that is conducted or supported by the Public Health Service (PHS).

Although the recipient institution and investigator bear the major responsibility for the proper care and use of animals, NIH staff, scientific review groups, and Councils and Boards also share this responsibility. Care and use of vertebrate animals in research must conform to applicable law and PHS policy, especially the “Principles for Use of Animals.” These principles can be summarized as two broad rules:

- The project should be worthwhile and justified on the basis of anticipated results for the good of society and the contribution to knowledge, and the work should be planned and performed by qualified scientists.
- Animals should be confined, restrained, transported, cared for, and used in experimental procedures in a manner that avoids any unnecessary discomfort, pain, or injury. Special attention must be provided when the proposed research involves dogs, cats, non-human primates, large numbers of animals, or animals that are in short supply or are costly.

Inclusion of Children as Participants in Research

It is the policy of the NIH that children (i.e., individuals under the age of 21) must be included in all human subjects research that is supported by the NIH, not solely in clinical research, as is the case for women and minorities, unless there are scientific or ethical reasons not to include them. This policy applies to all research involving human subjects, including research that is otherwise “exempt.” Proposals for research involving human subjects must include a plan for including children. If children are excluded from the research, the application must present an acceptable justification for the exclusion. Pertinent information on the inclusion of children in NIH-supported research may be found at: http://grants.nih.gov/grants/guide/notice-files/not98-024.html.
IRGs may recommend concurrence, restriction, or limitation of the research, or unsoring of the application, based upon acceptability of the proposed research and standards regarding humane care and use of laboratory animals. Although evaluation and priority ratings are based solely upon scientific merit, any comments, concerns, restrictions, or limitations regarding the use or care of laboratory animals are noted in the Summary Statements. All applications about which there are concerns or objections are called to the attention of the Board for concurrence or nonconcurrence. No award is made until NCI staff, NIH, and the applicant institution have resolved all concerns concurred upon by the Board. Follow-up reports of action taken on each grant application are presented at the next Board meeting.

**Biohazardous Research**

The investigator and the sponsoring institution are responsible for protecting both the environment and the research personnel from hazardous conditions. As with research involving human subjects, reviewers are expected to apply the collective standards of the professions represented within the IRG to the identification of potential hazards, such as inappropriate handling of oncogenic viruses, chemical carcinogens, infectious agents, radioactive or explosive materials, or recombinant DNA.

If applications pose special biohazards, these hazards are identified on the Summary Statement. Any concerns about the adequacy of safety procedures are highlighted with a special note (biohazard). No award is made until all concerns about hazardous procedures or conditions have been resolved to the satisfaction of the NIH.

Robbie Barbero, Ph.D.
Assistant Director for Biological Innovation
Office of Science and Technology Policy
Executive Office of the President
Washington, DC
(John P. Holdren, Ph.D.--OSTP)

Vincent J. Cogliano, Ph.D.
Acting Director
Integrated Risk Information System Program
National Center for Environmental Assessment
Office of Research and Development
U.S. Environmental Protection Agency
Washington, DC
(Lisa Jackson, M.S.--EPA)

Michael Kelley, M.D., FACP
National Program Director for Oncology
Veterans Health Administration
U.S. Department of Veterans Affairs
Washington, DC
(The Honorable Dr. Michael J. Kussman)

Aubrey Miller, M.D.
Senior Medical Officer
National Institute of Environmental Health Sciences
National Institutes of Health
Bethesda, MD
(Linda S. Birnbaum, Ph.D., DABT, A.T.S.--NIEHS)

Richard Pazdur, M.D., F.A.C.P.
Director
Office of Hematology Oncology Products (OHOP)
Center for Drug Evaluation and Research (CDER)
U.S. Food and Drug Administration
Rockville, MD
(Robert Califf, M.D.--FDA)

Craig D. Shriver, M.D., F.A.C.S., COL., M.C.
Director, John P. Murtha Cancer Center
Chief, General Surgery
Program Director, National Capital Consortium General Surgery
Principal Investigator, Clinical Breast Care Project
Professor of Surgery, Uniformed Services University
Bethesda, MD
(Karen S. Guice, M.D., M.P.P.--DOD)

Kerry Souza, Sc.D., M.P.H.
National Institute for Occupational Safety and Health
Washington, DC
(John Howard, M.D., M.P.H., J.D., LL.M.--NIOSH)
Lawrence A. Tabak, D.D.S., Ph.D.
Principal Deputy Director
National Institutes of Health
Bethesda, MD
(Francis S. Collins, M.D., Ph.D.–NIH)

Richard J. Thomas, M.D., M.P.H.
Deputy Director
Office of Occupational Medicine
OSHA / Department of Labor
Washington, DC
(The Honorable Thomas E. Perez–DOL)

Executive Secretary

Paulette S. Gray, Ph.D.
Director
Division of Extramural Activities
National Cancer Institute, NIH
Bethesda, MD

Committee Management Officer

Ms. Claire L. Harris
Division of Extramural Activities
National Cancer Institute, NIH
Bethesda, MD
APPENDIX D

BOARD OF SCIENTIFIC ADVISORS

Chair

Chi V. Dang, M.D., Ph.D. 2018
Professor of Medicine
Division of Hematology-Oncology
Department of Medicine
Director, Abramson Cancer Center
Director, Abramson Cancer Research Institute
Perelman School of Medicine
University of Pennsylvania
Philadelphia, PA

Members

Kenneth C. Anderson, M.D., Ph.D. 2018
Kraft Family Professor of Medicine
Harvard Medical School
Director, Lebow Institute for Myeloma Therapeutics
Dana-Farber Cancer Institute
Boston, MA

Dafna Bar-Sagi, Ph.D. 2018
Vice Dean for Science, Senior Vice President, and Chief Scientific Officer
Professor, Department of Biochemistry and Molecular Pharmacology
NYU Langone Medical Center
New York University School of Medicine
New York, NY

Ethan M. Basch, M.D., M.Sc. 2017
Associate Professor of Medicine
Division of Hematology/Oncology
Director, Cancer Outcomes Research Program
University of North Carolina at Chapel Hill
Chapel Hill, NC

Sangeeta N. Bhatia, M.D., Ph.D. 2017
John H. and Dorothy Wilson Professor
Division of Health Sciences and Technology and Electrical Engineering and Computer Science
Massachusetts Institute of Technology
Cambridge, MA

Arul M. Chinnaian, M.D., Ph.D. 2018
S.P. Hicks Endowed Professor
Professor of Pathology and Urology
Director, Pathology Microarray Center
Director, Pathology Research Informatics
Director, Cancer Bioinformatics
Director, Michigan Center for Translational Pathology
University of Michigan
Ann Arbor, MI

Graham A. Colditz, M.D., Dr.P.H. 2017
Niess-Gain Professor of Surgery
Professor of Medicine and Associate Director, Prevention and Control
Alvin J. Siteman Cancer Center
Deputy Director, Institute for Public Health
Barnes Jewish Hospital
Chief, Division of Public Health Sciences
Department of Surgery
Washington University School of Medicine
St. Louis, MO

Joseph M. DeSimone, Ph.D. 2019
Chancellor’s Eminent Professor of Chemistry at UNC
William R. Kenan Jr. Distinguished Professor of Chemical Engineering at NC State and of Chemistry at UNC
University of North Carolina at Chapel Hill
Chapel Hill, NC
Daniel C. DiMaio, M.D., Ph.D. 2017
Waldemar Von Zedwitz Professor and Vice Chairman of Genetics
Department of Genetics
Professor of Therapeutic Radiology and Molecular Biophysics and Biochemistry
Scientific Director
Yale Cancer Center
Yale University School of Medicine
New Haven, CT

Karen M. Emmons, Ph.D. 2018
Deputy Director
Center for Community Based Research
Dana-Farber Cancer Institute
Professor, Department of Society, Human Development and Health
Harvard School of Public Health
Boston, MA

Carol E. Ferrans, Ph.D., R.N., FAAN 2020
Professor and Associate Dean for Research
Director, UIC Center of Excellence in Eliminating Health Disparities
Department of Biobehavioral Health Sciences
College of Nursing
University of Illinois at Chicago
Chicago, IL

Chanita Hughes-Halbert, Ph.D. 2017
Professor and Endowed Chair
Department of Psychiatry and Behavioral Sciences
Medical University of South Carolina
Hollings Cancer Center
Charleston, SC

James V. Lacey, Jr., Ph.D., M.P.H. 2020
Director and Associate Professor
Division of Cancer Etiology
Department of Population Sciences
Beckman Research Institute
City of Hope
Duarte, CA

Maria E. Martinez, M.P.H., Ph.D. 2018
Professor
Department of Family and Preventive Medicine
Program Leader, Reducing Cancer Disparities
Moores Cancer Center
University of California, San Diego
La Jolla, CA

Luis F. Parada, Ph.D. 2018
Chairman
Department of Developmental Biology
Southwestern Ball Distinguished Chair in Neuroscience Research
Director, Kent Waldrep Center for Basic Research on Nerve Growth and Regeneration
Diana & Richard C. Strauss Distinguished Chair in Developmental Biology
University of Texas Southwestern Medical Center
Dallas, TX

Diane Zipursky Quale, J.D. 2019
Co-Founder and President
Bladder Cancer Advocacy Network
Bethesda, MD

Martine F. Roussel (Sherr), Ph.D. 2017
St. Jude Children’s Research’ Endowed Chair in Molecular Oncogenesis
Full Professor, Department of Molecular Sciences
The University of Tennessee
Full Member
Department of Tumor Cell Biology
St. Jude Children’s Research Hospital
Memphis, TN

Victoria L. Seewaldt, M.D. 2020
Ruth Ziegler Professor
Chair, Department of Population Sciences
Beckman Research Institute
City of Hope
Duarte, CA

Kevin M. Shannon, M.D. 2017
Roma and Marvin Auerback Distinguished Professor in Molecular Oncology
American Cancer Society Research Professor
Department of Pediatrics
University of California, San Francisco
San Francisco, CA

Mary L. Smith, J.D., M.B.A. 2017
Co-Founder
Research Advocacy Network
Naperville, IL

Cheryl L. Walker, Ph.D., A.T.S., FAAAS* 2017
Professor and Director
Institute of Biosciences and Technology
Center for Translational Cancer Research
Welch Chair in Chemistry
Texas A&M Health Science Center
Houston, TX
Eileen P. White, Ph.D.  
Distinguished Professor  
Department of Molecular Biology  
and Biochemistry  
Associate Director for Basic Science  
Rutgers Cancer Institute of New Jersey  
New Brunswick, NJ  

Paulette S. Gray, Ph.D.  
Director  
Division of Extramural Activities  
National Cancer Institute  
National Institutes of Health  
Bethesda, MD  

Kevin P. White, Ph.D.  
James and Karen Frank Family Professor  
Department of Human Genetics  
Professor, Department of Ecology and Evolution  
Director, Institute for Genomics  
and Systems Biology  
Knapp Center for Biomedical Discovery  
The University of Chicago  
Chicago, IL  

Executive Secretary
APPENDIX E

BOARD OF SCIENTIFIC COUNSELORS
Clinical Sciences and Epidemiology

CHAIR

Louis M. Weiner, M.D. 2017
Lombardi Comprehensive Cancer Center
Francis L. and Charlotte G. Gragnani Chair
Department of Oncology
Associate Vice President
Georgetown University Medical Center
Washington, DC

Members

Jonnie L. Bernstein, Ph.D. 2017
Member
Department of Epidemiology and Biostatistics
Memorial Sloan-Kettering Cancer Center
New York, NY

Julie E. Buring, Sc.D. 2019
Professor of Medicine
Harvard Medical School
Division of Preventive Medicine
Brigham and Women’s Hospital
Boston, MA

Nicola J. Camp, Ph.D. 2018
Professor of Genetic Epidemiology and Human Genetics
Division of Genetic Epidemiology
Departments of Medicine and Human Genetics
University of Utah
Salt Lake City, UT

Graham Casey, Ph.D. 2019
Professor and Head
Division of Cancer Epidemiology and Genetics
Department of Preventive Medicine
Keck School of Medicine
University of Southern California
Los Angeles, CA

Susan Cohn, M.D. 2017
Director of Pediatric Clinical Sciences and Professor
Department of Pediatrics
Section of Hematology/Oncology
University of Chicago
Chicago, IL

John F. Dipersio, M.D., Ph.D. 2018
Deputy Director
Siteman Cancer Center
Professor of Medicine, Pathology, Immunology, and Pediatrics
Division of Oncology
Washington University School of Medicine
St. Louis, MO

Kojo S.J. Elenitoba-Johnson, M.D. 2018
Henry Clay Bryant Professor of Pathology
Director, Division of Translational Pathology
Director, Molecular Diagnostics Laboratory
Director, Department of Pathology
The University of Michigan Medical School
Ann Arbor, MI

Elizabeth T.H. (Terry) Fontham, Dr.P.H., M.P.H 2019
Founding Dean and Professor Emeritus
School of Public Health
Louisiana State University Health Science Center
New Orleans, LA

Michael L. Freeman, Ph.D. 2018
Director and Professor
Division of Radiation Oncology
Department of Radiation Oncology
Professor of Cancer Biology and Radiology
Vanderbilt University School of Medicine
Nashville, TN

Nancy Goodman, J.D. 2018
Founder and Executive Director
Kids v Cancer
Washington, DC
Gary D. Hammer, M.D., Ph.D.  2020
Millie Schembechler Professor of Adrenal Cancer
Director, Endocrine Oncology Program
Director, Center for Organogenesis
The University of Michigan
Ann Arbor, MI

Patricia M. Lorusso, D.O.  2020
Associate Director
Innovative Medicine at Yale Cancer Center
Professor, Department of Medicine
Smilow Cancer Hospital at Yale-New Haven
Yale University
New Haven, CT

David A. Norris, M.D.  2018
Professor and Chairman
Department of Dermatology
University of Colorado School of Medicine
Aurora, CO

Raphael E. Pollock, M.D., Ph.D., FACS  2017
Head
Division of Surgery
Professor, Department of Surgical Oncology
University of Texas M.D. Anderson Cancer Center
Houston, TX

Roman Perez-Soler, M.D.  2020
Professor and Chairman
Department of Oncology
Montefiore Medical Center
Deputy Director, Albert Einstein Cancer Center
Director, Division of Medical Oncology
Albert Einstein College of Medicine
Bronx, NY

Alfredo Quinones-Hinojosa, M.D.  2019
Professor of Neurological Surgery, Oncology, Neuroscience, and Cellular and Molecular Medicine
Director, Brain Tumor Surgery Program
Director, Pituitary Surgery Program
The Johns Hopkins University School of Medicine
Baltimore, MD

Chair and Staff
Department of Stem Cell Biology and Regenerative Medicine
Lerner Research Institute
Cleveland Clinic Professor
Department of Molecular Medicine
Cleveland Clinic Lerner College of Medicine
Case Western Reserve University
Cleveland, OH

A. Oliver Sartor, M.D.  2019
Medical Director
Tulane Cancer Center
Departments of Medicine and Urology
Tulane Medical School
New Orleans, LA

Joan H. Schiller, M.D.  2020
Deputy Director for Clinical Investigation
Invo Schar Cancer Institute
Falls Church, VA

Stephen M. Schwartz, Ph.D., M.P.H.  2020
Member, Program in Epidemiology
Division of Public Health Sciences
Fred Hutchinson Cancer Research Center
Professor, Department of Epidemiology
University of Washington
Seattle, WA

Walter M. Stadler, M.D., FACP  2017
Fred C. Buffet Professor of Medicine
Associate Dean for Clinical Medicine
Department of Hematology/Oncology
University of Chicago Medical Center
Chicago, IL

Ren Sun, Ph.D.  2020
Professor
Department of Molecular and Medical Pharmacology
David Geffen School of Medicine
Professor, Department of Bioengineering
University of California, Los Angeles
Los Angeles, CA
Sally W. Vernon, Ph.D. 2020
Chair
Department of Health Promotion and Behavioral Sciences
Center for Health Promotion and Prevention Research
Blair Justice, Ph.D. Professorship in Mind-Body Medicine and Public Health
The University of Texas School of Public Health Houston, TX

Executive Secretary

Brian Wojcik, Ph.D.
Institute Review Office
Office of the Director
National Cancer Institute
Bethesda, MD
APPENDIX F

BOARD OF SCIENTIFIC COUNSELORS
Basic Sciences

Chair

Sara Courtereidge, Ph.D. 2017
Professor
Department of Cell, Developmental and Cancer Biology
Member, Center for Spatial Systems Biomedicine
Associate Director for Translational Sciences, Knight Cancer Institute
Oregon Health & Science University
Portland, OR

Members

Amnon Altman, Ph.D. 2019
Director, Scientific Affairs
Professor and Head
Division of Cell Biology
La Jolla Institute for Allergy and Immunology
La Jolla, CA

Hashim M. Al-Hashimi, Ph.D. 2020
James B. Duke Professor of Biochemistry
Director, Duke Center for RNA Biology
Professor, Department of Biochemistry and Chemistry
Duke University Medical Center
Durham, NC

Peter Cresswell, Ph.D., FRS 2020
Investigator, Howard Hughes Medical Institute
Eugene Higgins Professor
Department of Immunobiology
Yale University School of Medicine
New Haven, CT

Alan D’Andrea, Ph.D. 2019
Professor of Pediatrics
Harvard Medical School
Director
Center for Genomic Stability and DNA Repair
Dana-Farber Cancer Institute
Boston, MA

Sharon Y.R. Dent, Ph.D. 2019
Professor and Chair
Department of Molecular Carcinogenesis
Director, Science Park Director
Center for Cancer Epigenetics
The University of Texas MD Anderson Cancer Center Science Park
Smithville, TX

Channing J. Der, Ph.D. 2019
Sarah Graham Kenan Distinguished Professor
UNC Lineberger Comprehensive Cancer Center
School of Medicine
The University of North Carolina at Chapel Hill
Chapel Hill, NC

Denise A. Galloway, Ph.D. 2020
Associate Director
Human Biology Division
Fred Hutchinson Cancer Research Center
Research Professor
Department of Microbiology
University of Washington
Seattle, WA

Angela M. Gronenborn, Ph.D. 2020
UPMC Rosalind Franklin Professor and Chair
Department of Structural Biology
Professor, Department of Bioengineering
Swanson School of Engineering
Director, Pittsburgh Center for HIV Protein Interactions
University of Pittsburgh
Pittsburgh, PA

Stephen D. Hursting, Ph.D., M.P.H. 2017
Professor and McKeen-Love Chair
Department of Nutritional, Molecular and Cellular Sciences
Academic Chair
University of Texas at Austin
Austin, TX

Sue Jinks-Robertson, Ph.D. 2020
Professor
Department of Molecular Genetics and Microbiology
Duke University Medical Center
Durham, NC
Jonathan Karn, Ph.D. 2019
Reinberger Professor of Molecular Biology and Microbiology
Director, CWRU/UH Center for AIDS Research School of Medicine
Case Western University
Cleveland, OH

Brian C. Lewis, Ph.D. 2018
Associate Professor
Program in Gene Function and Expression
University of Massachusetts Medical School
Worcester, MA

Sergio A. Lira, M.D., Ph.D. 2018
The Leona M. and Harry B. Helmsley Charitable Trust Professor of Immunology
Co-Director
Immunology Institute
Icahn School of Medicine at Mount Sinai
Mount Sinai School of Medicine
New York, NY

Roeland Nusse, Ph.D. 2017
Professor, Department of Developmental Biology
Investigator, Howard Hughes Medical Institute
Stanford University School of Medicine
Stanford, CA

Daniel Romo, Ph.D. 2018
Professor
Department of Chemistry
Director, Natural Products LINCHPIN Laboratory
College of Sciences
Texas A & M University
College Station, TX

Paul W. Spearman, M.D. 2020
Professor, Division Director and Vice Chair for Research
Department of Pediatrics
Division of Infectious Diseases
Emory University School of Medicine
Atlanta, GA

Mark A. Wainberg, Ph.D. 2019
Professor and Director, McGill University AIDS Center
c/o Jewish General Hospital
Montreal, Quebec, Canada

Tzyy-Choou Wu, M.D., Ph.D., M.P.H. 2017
Professor
Departments of Pathology, Oncology, Obstetrics, and Gynecology
The Johns Hopkins University School of Medicine
Baltimore, MD

Dong-Er Zhang, Ph.D. 2017
Professor, Department of Pathology
Division of Biological Sciences
Member, Moores UCSD Cancer Center
University of California, San Diego
La Jolla, CA

Executive Secretary

Mehrdad Tondravi, Ph.D.

NCI COUNCIL OF RESEARCH ADVOCATES

Chair

David F. Arons, J.D.  2016
Interim Chief Executive Officer
National Brain Tumor Society
Boston, MA

Members

Gregory H. Aune, M.D., Ph.D.  2018
Assistant Professor of Pediatrics
The University of Texas Health Science Center
San Antonio, TX

Mary Ann Battles, M.S.  2018
Head, Clinical Quality and Compliance
Genentech/Roche
South San Francisco, CA

William P. Bro  2019
President/Chief Executive Officer
Kidney Cancer Association
Evanston, IL

Sue J. Friedman, D.V.M.  2019
Executive Director
Facing Our Risk of Cancer Empowered
Coral Springs, FL

Martha Gaines, J.D., LL.M.  2017
Associate Dean
Academic Affairs and Experiential Learning Director
Center for Patient Partnership
University of Wisconsin Law School
Madison, WI

Joya Delgado Harris, M.P.H.  2016
Director, Research Integration
Extramural Grants Department
American Cancer Society
Atlanta, GA

June M. McKoy, M.D., M.P.H., J.D.  2017
Associate Professor of Medicine
Department of Medicine and Preventive Medicine
Northwestern University Feinberg School of Medicine
Chicago, IL

Kimberly Newman-McCown  2018
Chair
Eastern Area Health and Human Services
The Links, Incorporated/The Links, Foundation
Melrose Park, PA

Heather C. Ortner  2019
Chief Executive Officer
Dr. Susan Love Research Foundation
Santa Monica, CA

Senaida Fernandez Poole, Ph.D.  2018
Program Officer, Community Initiatives and Public Health Sciences
California Breast Cancer Research Program
Oakland, CA

Roberto A. Vargas, M.P.H.  2019
Navigator

National Cancer Institute
National Institutes of Health
Bethesda, MD
Clinical Research: NIH defines human clinical research as: (1) Patient-oriented research. Research conducted with human subjects (or on material of human origin such as tissues, specimens, and cognitive phenomena) for which an investigator (or colleague) directly interacts with human subjects. Excluded from this definition are in vitro studies that utilize human tissues that cannot be linked to a living individual. Patient-oriented research includes: (a) mechanisms of human disease, (b) therapeutic interventions, (c) clinical trials, or (d) development of new technologies. (2) Epidemiologic and behavioral studies. (3) Outcomes research and health services research. Note: Not considered clinical research by this definition is: research involving the collection or study of existing data, documents, records, pathologic specimens, or diagnostic specimens, if these sources are publicly available or if the information is recorded by the investigator in such a manner that subjects cannot be identified, directly or through identifiers linked to the subjects.

Clinical Trial: For purposes of reviewing applications submitted to the NIH, a clinical trial is operationally defined as a prospective biomedical or behavioral research study of human subjects that is designed to answer specific questions about biomedical or behavioral interventions (drugs, treatments, devices, or new ways of using known drugs, treatments, or devices).

Clinical trials are used to determine whether new biomedical or behavioral interventions are safe, efficacious, and effective. Clinical trials of experimental drug, treatment, device, or behavioral intervention may proceed through the following phases:

- **Phase 0** trials represent the earliest step in testing new treatments in humans. In a phase 0 trial, a very small dose of a chemical or biologic agent is given to a small number of people (approximately 10-15) to gather preliminary information about how the agent is processed by the body (pharmacokinetics) and how the agent affects the body (pharmacodynamics). Because the agents are given in such small amounts, no information is obtained about their safety or effectiveness in treating cancer.

- **Phase I** clinical trials are conducted to test a new biomedical or behavioral intervention in a small group of people (e.g., 20-80) for the first time to evaluate safety (e.g., determine a safe dosage range, and identify side effects).

- **Phase II** clinical trials are done to study the biomedical or behavioral intervention in a larger group of people (several hundred) to determine efficacy and to further evaluate its safety.

- **Phase III** studies are conducted to study the efficacy of the biomedical or behavioral intervention in large groups of human subjects (from several hundred to several thousand) by comparing the intervention to other standard or experimental interventions as well as to monitor adverse effects, and to collect information that will allow the interventions to be used safely.

- **Phase IV** studies are done after the intervention has been marketed. These studies are designed to monitor effectiveness of the approved intervention in the general population and to collect information about any adverse effects associated with widespread use.

NIH-Defined Phase III Clinical Trial: For the purpose of the NIH Grants Policy Guidelines, an NIH-defined Phase III clinical trial is a broadly based prospective NIH-defined Phase III clinical investigation, usually involving several hundred or more human subjects, for the purpose of evaluating an experimental intervention in comparison with a standard or control intervention or comparing two or more existing treatments. Often, the aim of such investigation is to provide evidence leading to a scientific basis for consideration of a change in health policy or standard of care. The definition includes pharmacologic, non-pharmacologic, and behavioral interventions given for disease prevention, prophylaxis, diagnosis, or therapy. Community trials and other population-based intervention trials also are included. For more information, please visit: http://www.cancer.gov/cancertopics/factsheet/information/clinical-trials/.
